State of the Art:

Commit Messages

- Free-form text which may describe
 - **What** the change was.
 - **Why** the change was made.

jfreechart rev 3405

(start): Changed from Date to long,
(end): Likewise,
(getStartMillis): New method,
(getEndMillis): Likewise,
(getStart): Returns new date instance,
(getEnd): Likewise.

Phex 3542

Minor change

Jabref rev 2917

Fixed NullPointerException
when downloading external
file and file directory is
undefined.

Subject: An appeal for more descriptive commit messages

I know there is a lot going on but **please can we be a bit more descriptive when committing changes.**

Recent log messages have included:

"some cleanup"

"more external service work"

"Fixed a bug in wiring"

which are a lot less informative than others...

<http://osdir.com/ml/apache.webservices.tuscany.devel/2006-02/msg00227.html>

Toby,

Going forward, **could I ask you to be more descriptive in your commit messages?**

Ideally you should state what you've changed and also why (unless it's obvious)... I know you're busy and this takes more time, but it will help anyone who looks through the log ...

<http://lists.macosforge.org/pipermail/macports-dev/2009-June/008881.html>

Sorry to be a pain in the neck about this, but could we **please use more descriptive commit messages?** I do try to read the commit emails, but since the vast majority of comments are "CAY-XYZ", I can't really tell what's going on unless I then look it up.

<http://osdir.com/ml/java.cayenne.devel/2006-10/msg00044.html>

We Propose: DeltaDoc

Describes the observable EFFECT of a change

- Conditions that trigger the changed code
- How the change impacts functional behavior and program state

DeltaDoc

Diff

```
19c19 , 22  
<     else return "";  
---  
>     else return pageParts[0];  
>     // else return "";
```

DeltaDoc

When calling `LastPage format(String s)`
If `s` is not `null` and `s.split ("[-]+").length != 2`
`return s.split ("[-]+")[0]` instead of `""`

DeltaDoc

Commit message

Temporary removed the trade routes from the game menu.

DeltaDoc

When calling FreeColMenuBar buildOrdersMenu

No longer

```
call JMenu.add(getMenuItem("assignTradeRouteAction"))
```

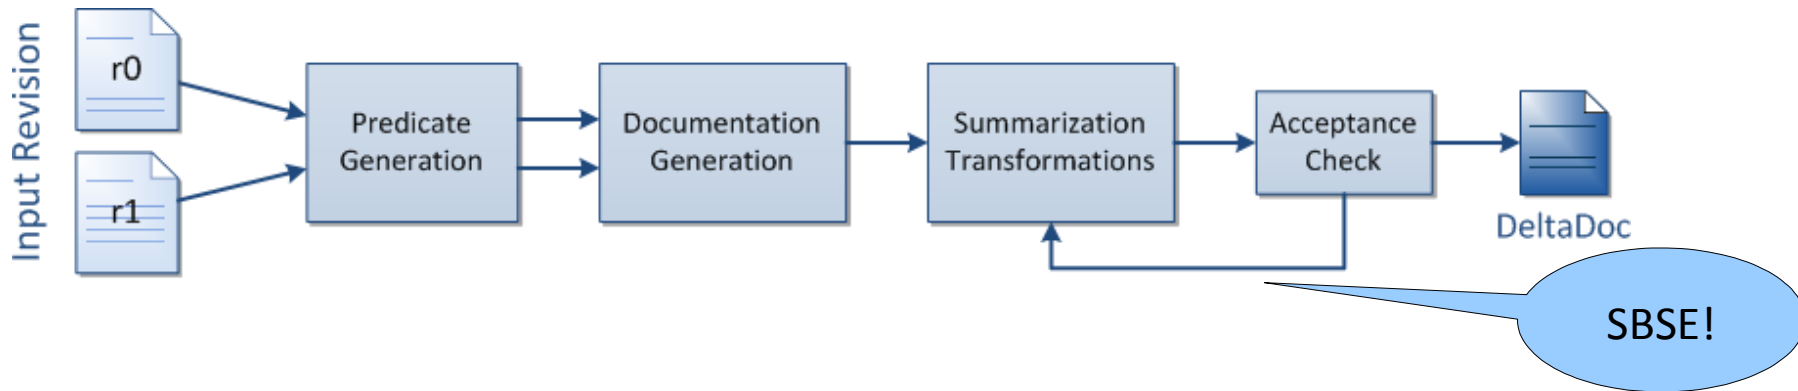

When calling FreeColMenuBar buildViewMenu

No longer

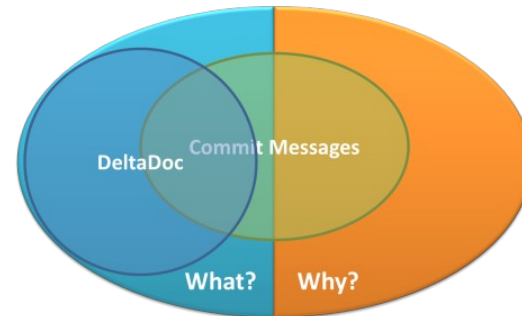

```
call JMenu.add(getMenuItem("tradeRouteAction"))
```

The rest of this talk

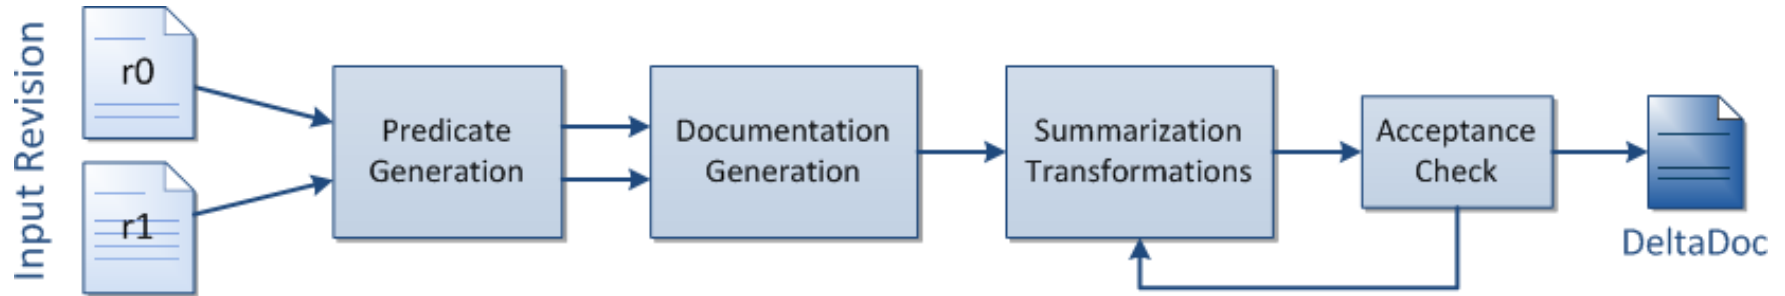

- Approach: How **DeltaDoc** works.

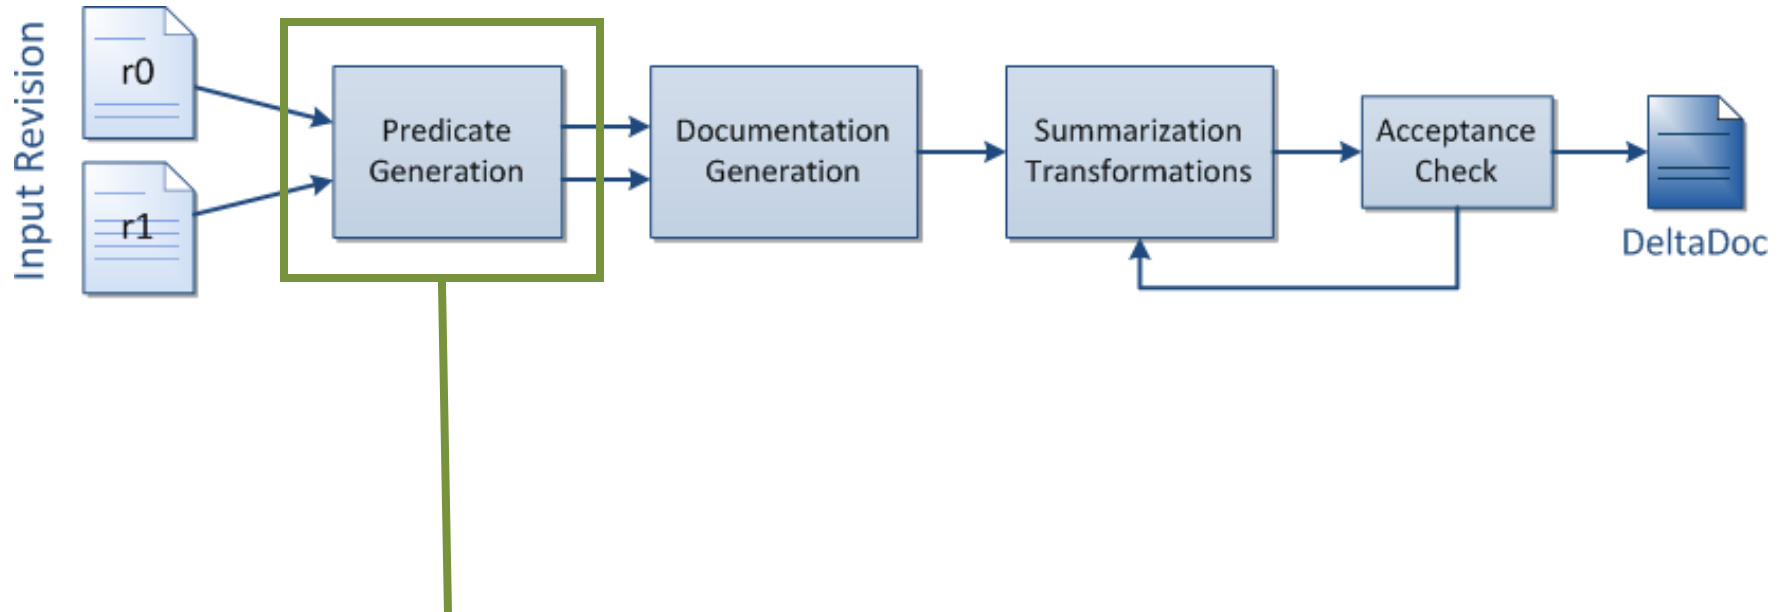

- Evaluation: Comparing **DeltaDoc** to **Commit messages**.

DeltaDoc Architecture

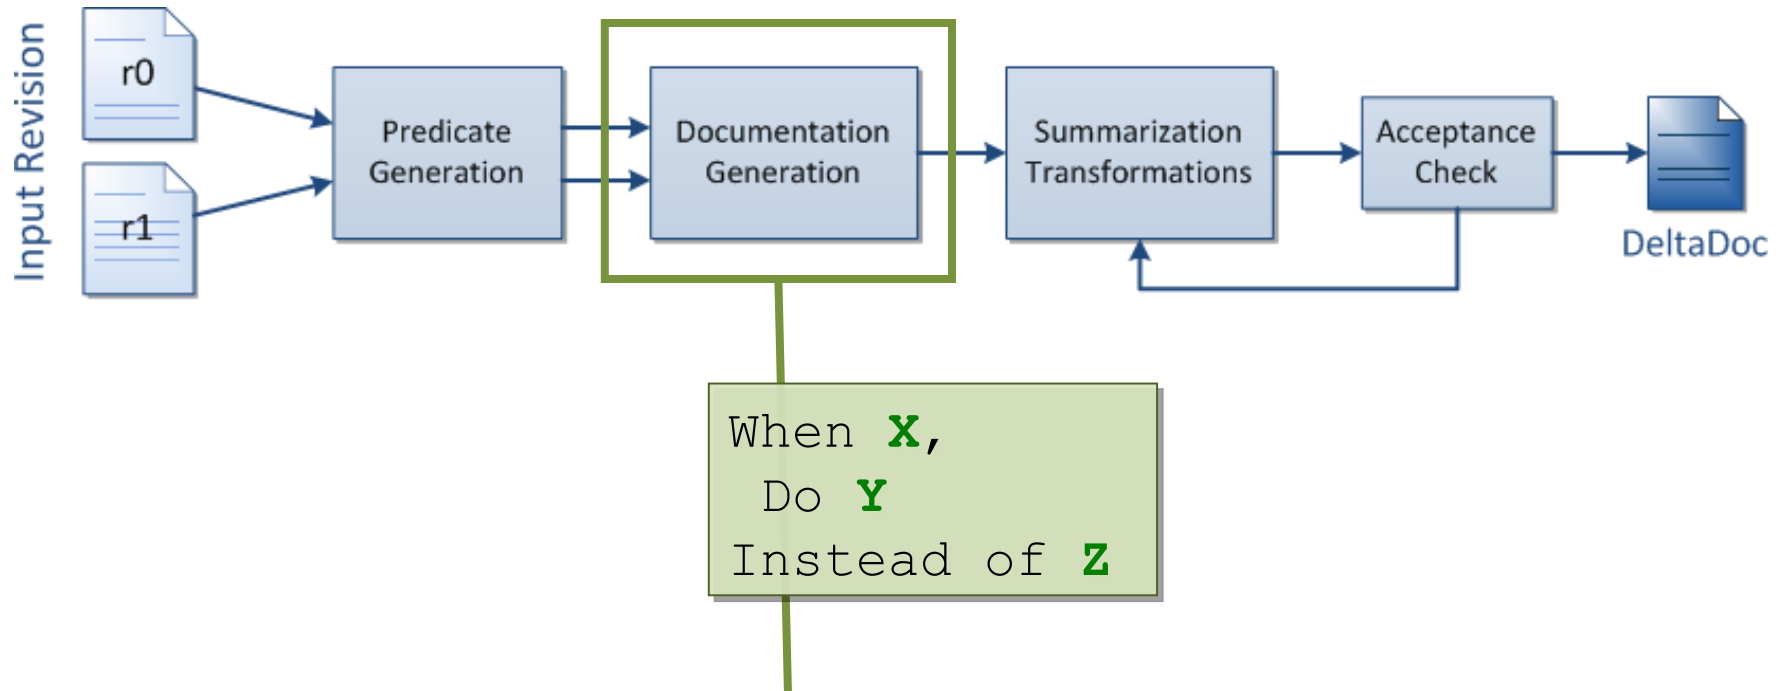

DeltaDoc Architecture

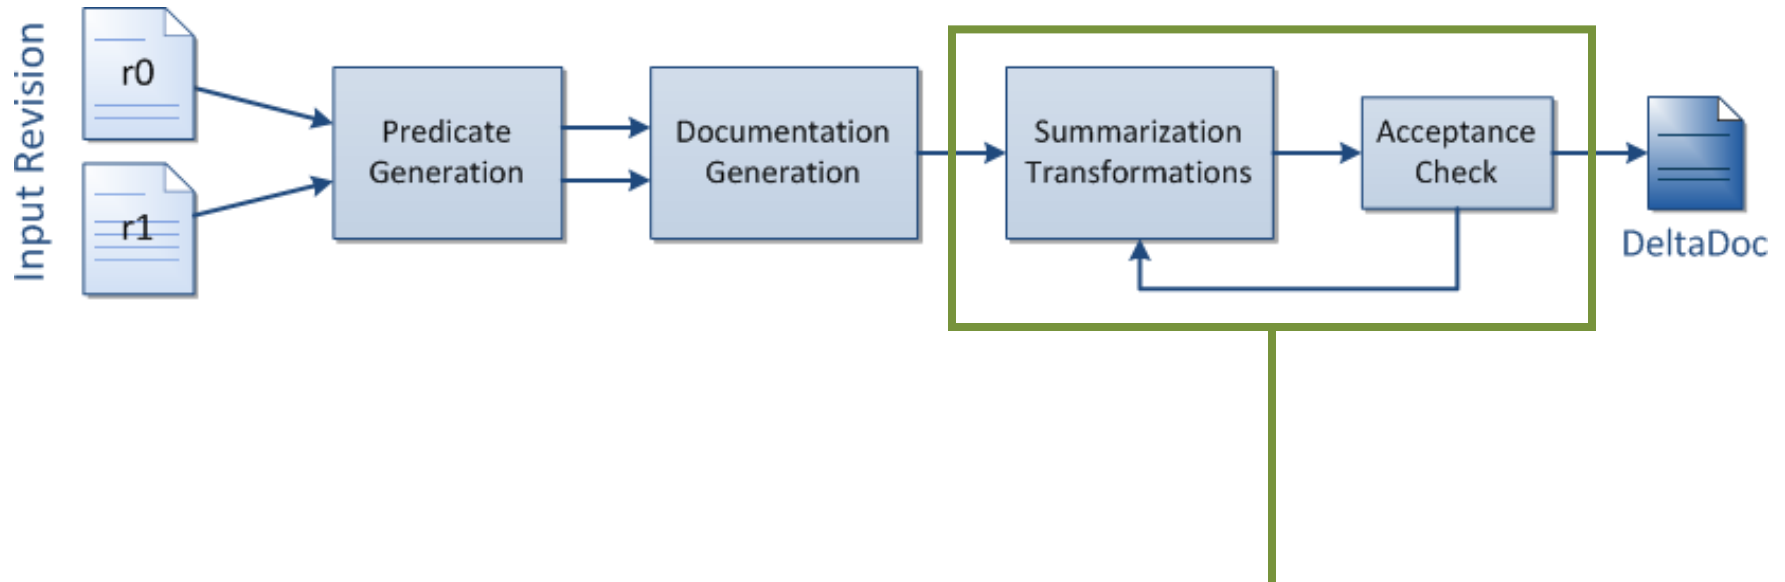

Compute symbolic path predicates for each statement.

DeltaDoc Architecture

Identify statements that have been added,
removed, or have a different predicate.

DeltaDoc Architecture

Apply summarization transformations until result is sufficiently concise.

Example Change

```
String sayHello(String name)
{
    String ret = "";

    if(name != null)
    {
        if(System.Lang == ENG)
            ret = ret + "Hello ";
        else
            ret = ret + "Bonjour ";

        ret = ret + name;
    }

    return ret;
}
```

```
String sayHello(String name)
{
    String ret = "";

    if(name != null)
    {
        if(System.Lang == ENG)
            ret = ret + "Hi ";
        else
            ret = ret + "Bonjour ";

        ret = ret + name;
    }

    return ret;
}
```

Example

Predicate Generation

Stmt	Symbolic	Path Predicate
<code>String ret = "";</code>	<code>ret = ""</code>	<code>true</code>
<code>name != null</code>	<code>name != null</code>	<code>true</code>
<code>System.Lang == ENG</code>	<code>System.Lang = ENG</code>	<code>name != null</code>
<code>ret = ret + "Hi ";</code>	<code>ret = "" + "Hi "</code>	<code>name != null</code> && <code>System.Lang = ENG</code>
<code>ret = ret + name;</code>	<code>ret = "" + "Hi " + name</code>	<code>name != null</code> && <code>System.Lang = ENG</code>
<code>return ret;</code>	<code>return "Hi " + name</code>	<code>name != null</code> && <code>System.Lang = ENG</code>

Example

Change Enumeration

	Stmt	Path Predicate
-	<code>return ""</code>	<code>name == null</code>
	<code>return "Hello " + name</code>	<code>name != null</code> <code>&& System.Lang = ENG</code>
	<code>return "Bonjour " + name</code>	<code>name != null</code> <code>&& System.Lang != ENG</code>
+	Stmt	Path Predicate
	<code>return ""</code>	<code>name == null</code>
	<code>return "Hi " + name</code>	<code>name != null</code> <code>&& System.Lang = ENG</code>
	<code>return "Bonjour " + name</code>	<code>name != null</code> <code>&& System.Lang != ENG</code>

Example

Generated Documentation

```
When calling sayHello(String name)  
  If name != null AND System.Lang == ENG  
    return "Hi " + name Instead of "Hello " + name
```

Summarization: Lossless

- Re-arrange terms (*code hoisting*)

```
If P and Q, Do X  
If P and Q and R, Do Y
```

```
If P and Q,  
Do X  
If R,  
Do Y
```

- Simplification (*common subexpression*)

```
If iter.hasNext  
  call iter.hasNext  
  call otherFun
```

```
If iter.hasNext  
  call otherFun
```

Summarization: Lossy

Remove irrelevant path predicates.

```
If s != null and a is true  
and b is true and c is true  
  return s
```

```
If s != null  
  return s
```

Summarization: Effects

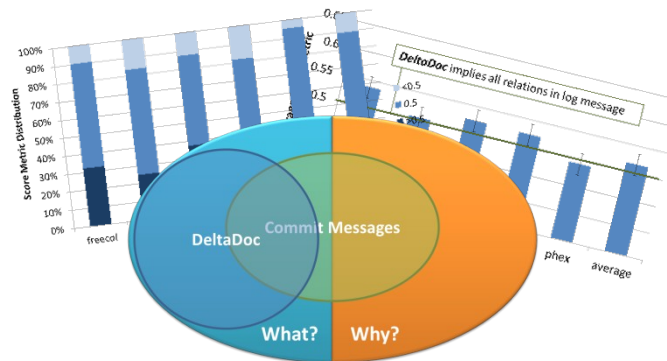

Random search, greedy prioritization of mutation operators.

Evaluation

Size

Content

Quality

(Human study: 16 graduate students)

Benchmarks

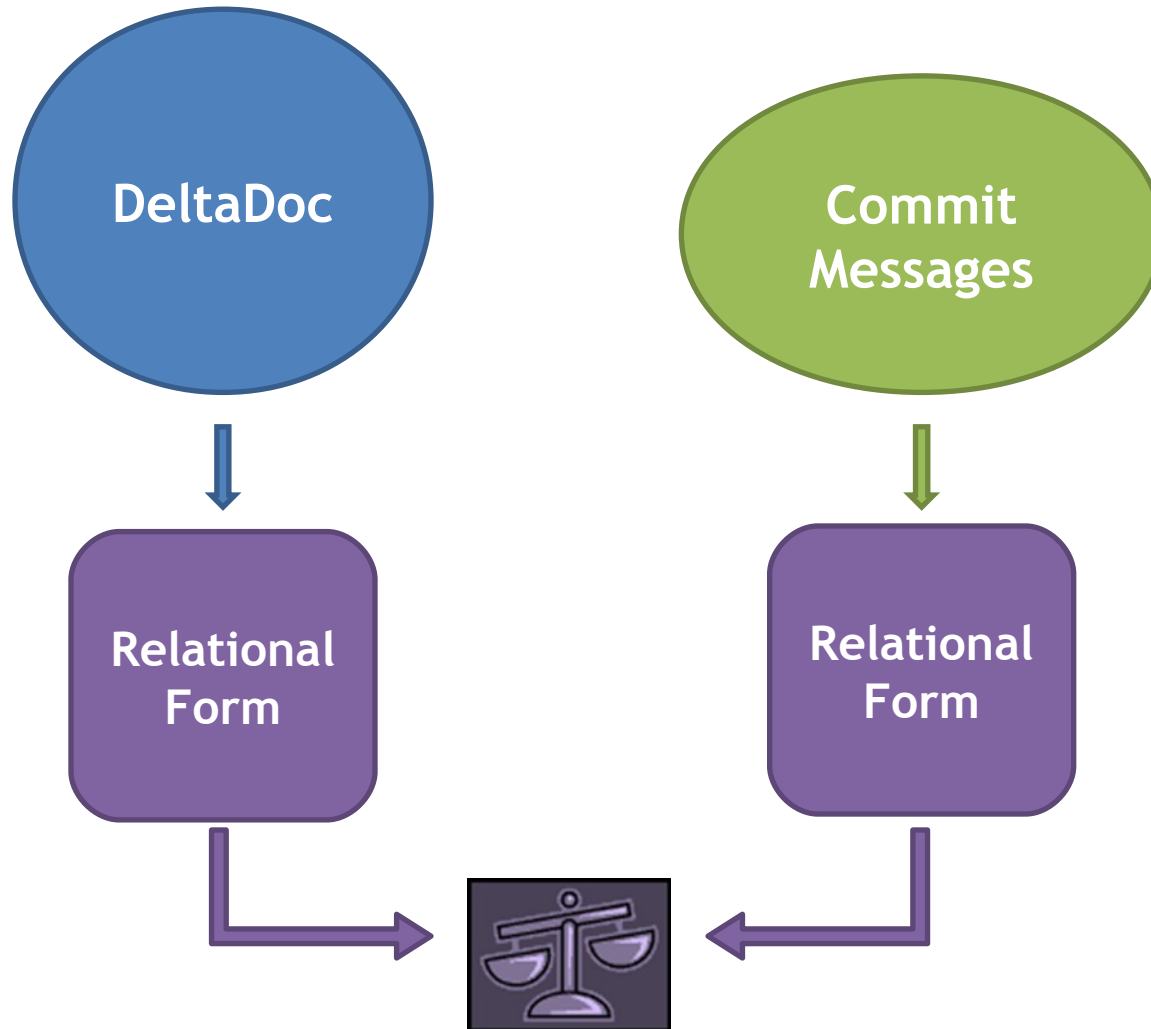

Name	Revisions	Domain	kLOC	Developers
FreeCol	2000-2200	Game	91	33
iText	3800-4000	PDF utility	200	14
jFreeChart	1700-1900	Presentation	305	3
JabRef	2500-2700	Reference Management	107	28
Phex	3500-3700	File Sharing	177	13
Total	1000		880	91

Size Comparison

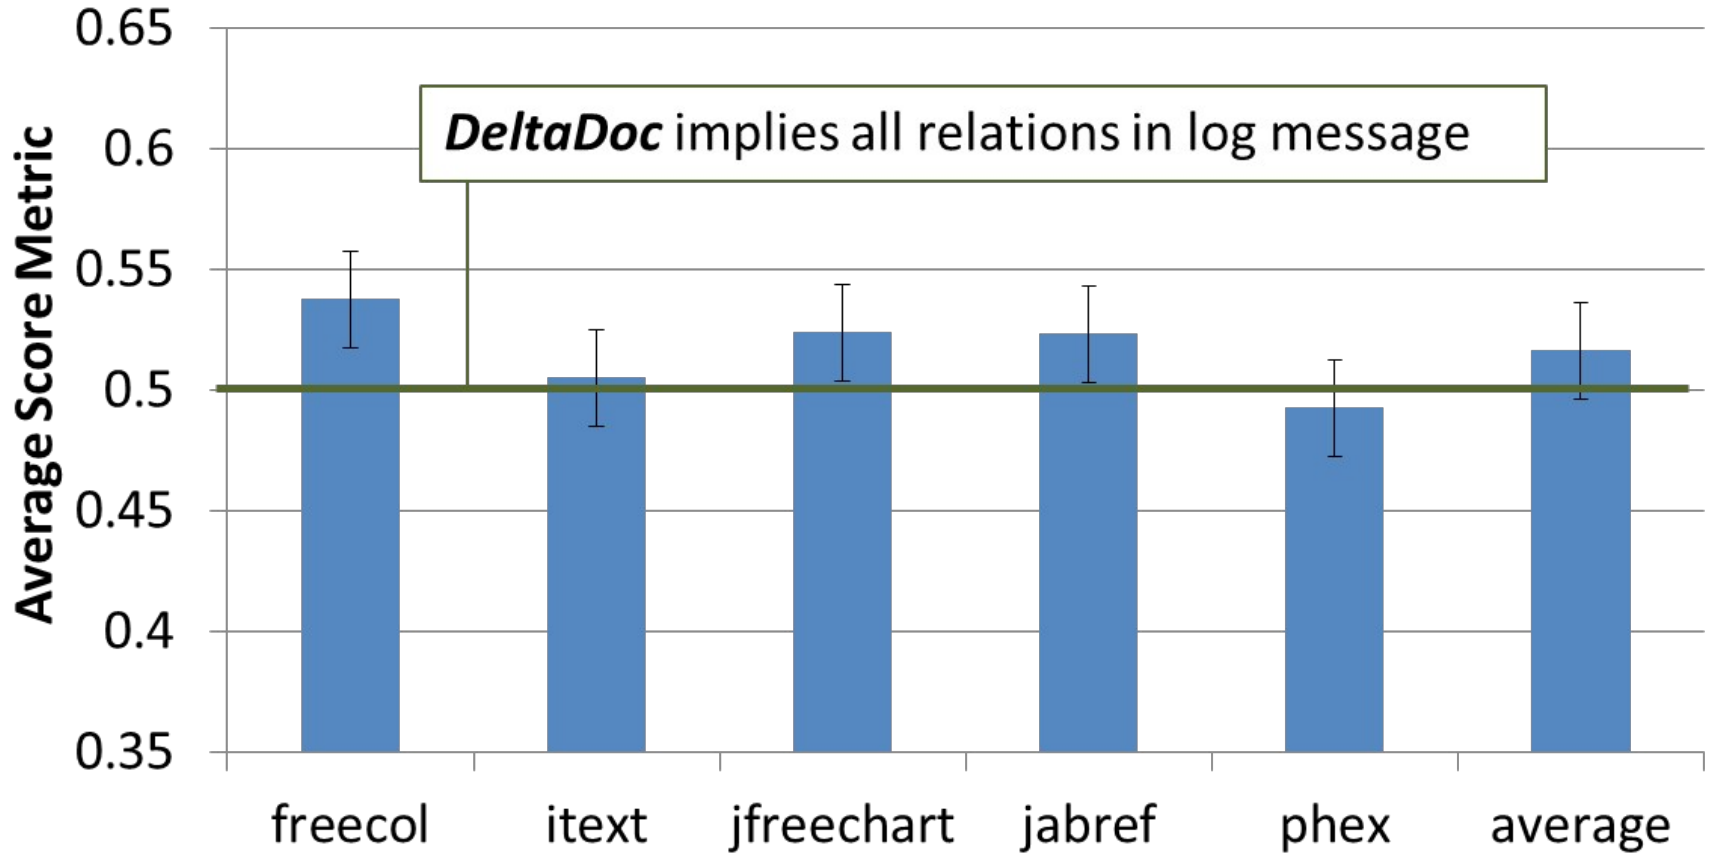

Content Comparison

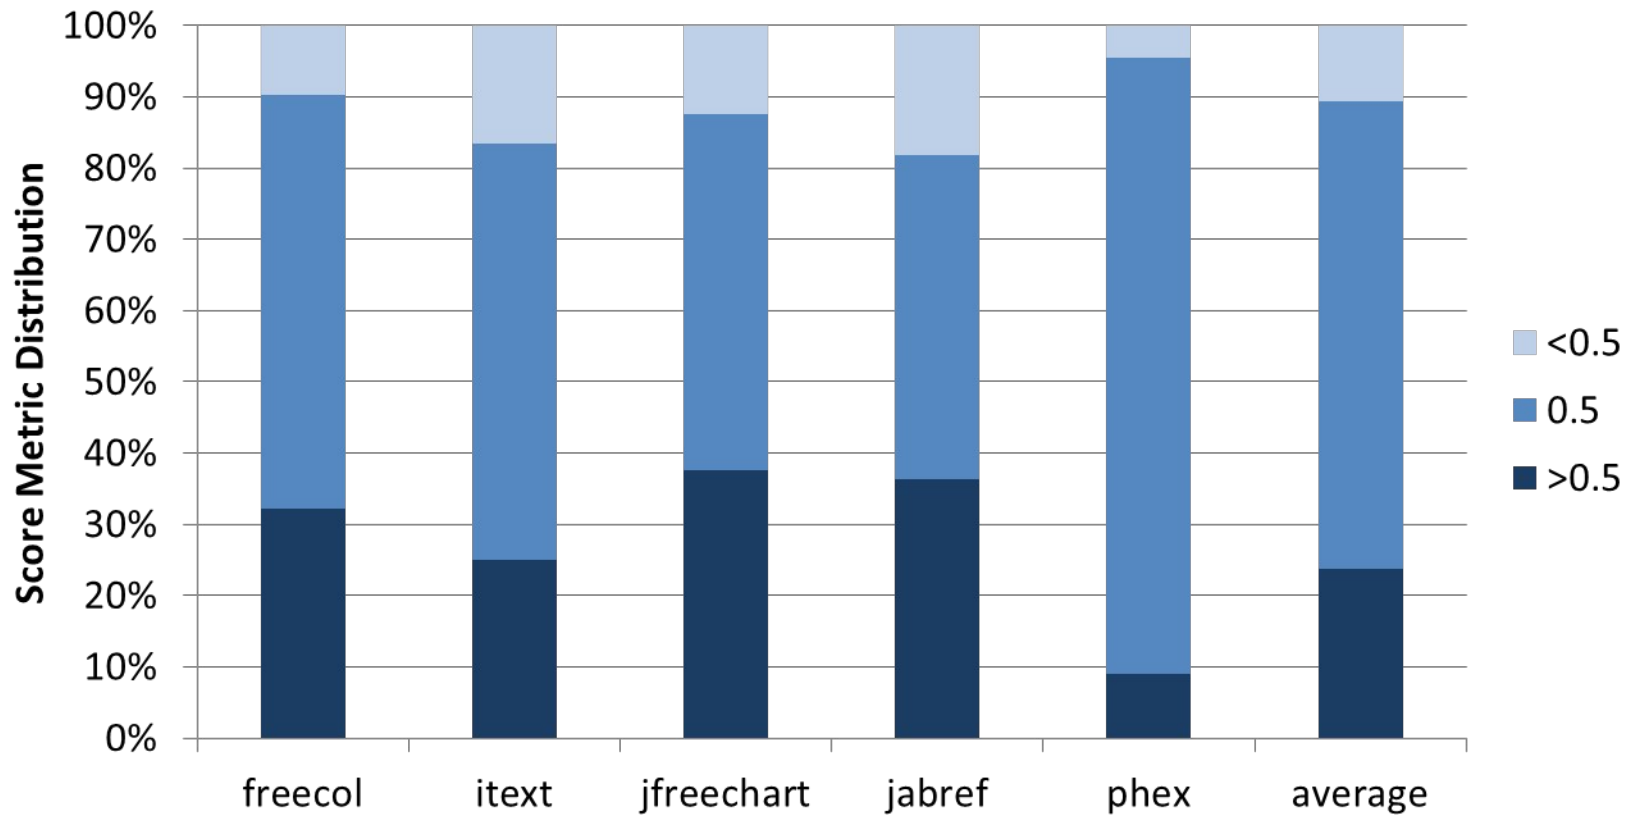

Score Metric

- Conservatively assume only relations from **commit messages** are important.
- Reward precision.
- Used 16 human annotators to validate.
- Score of 0.5 indicates that the **DeltaDoc** contained all the information in the **commit message**.

Results

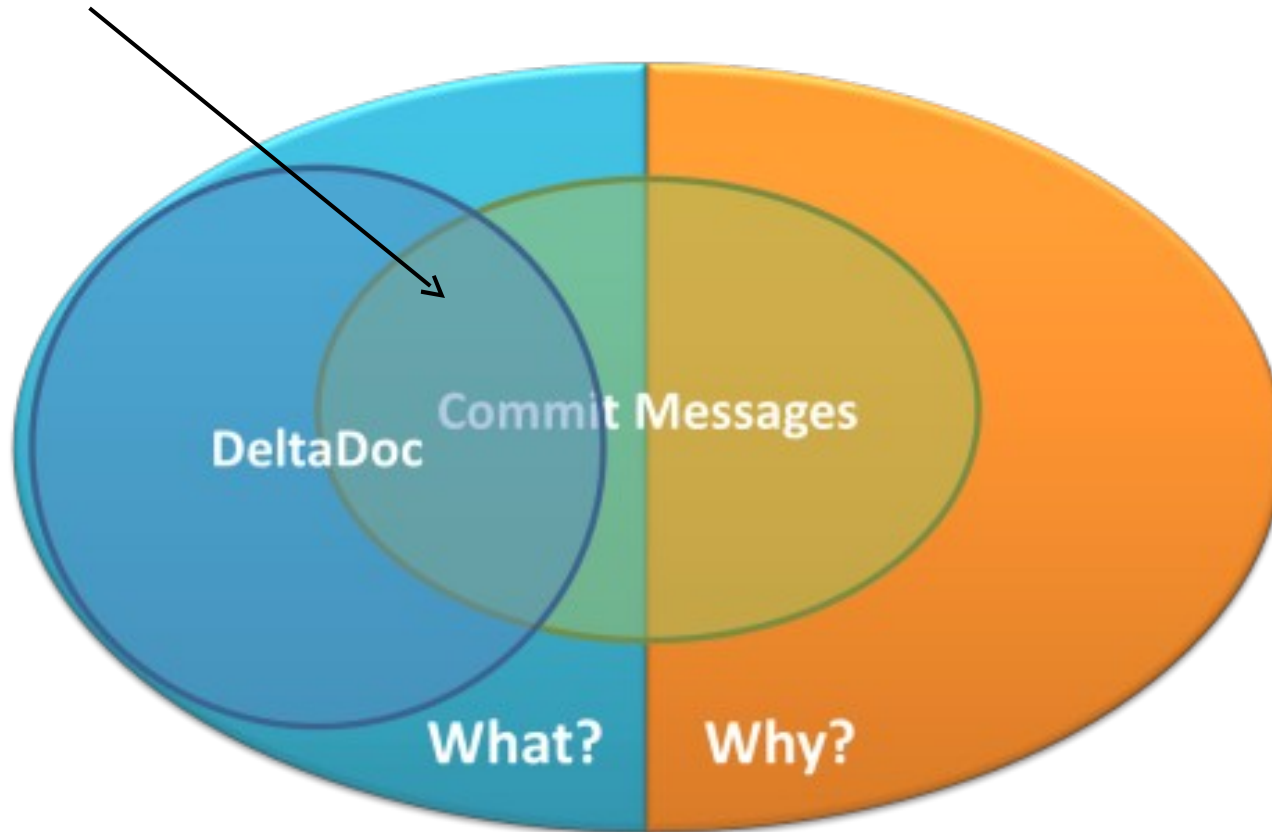

Results

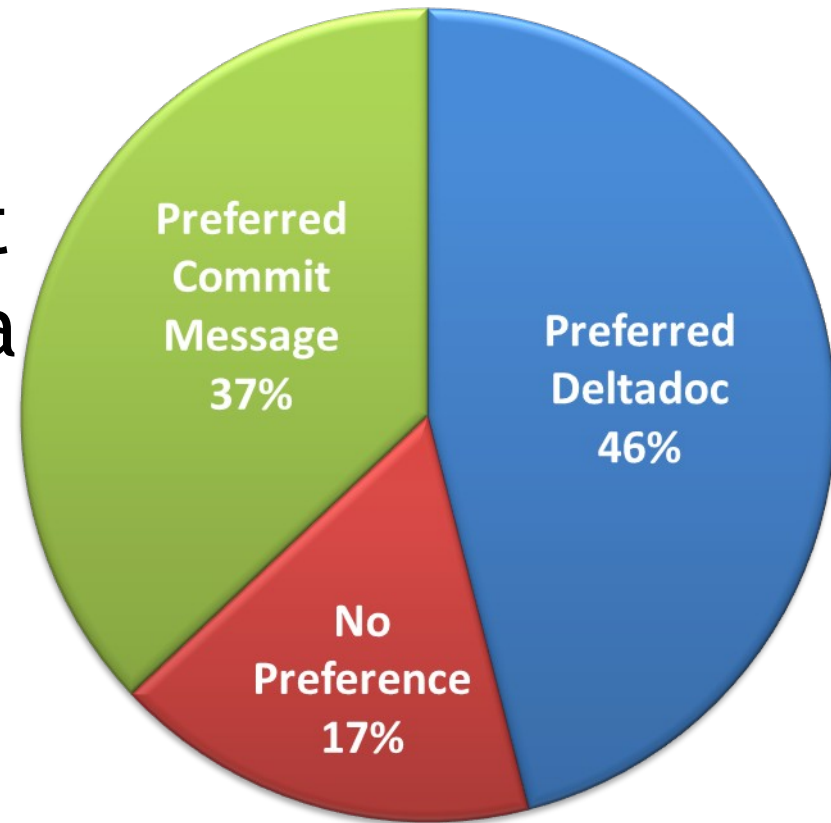

Results

About 89% coverage.

Qualitative Evaluation

“very useful” “highly useful” “would be a great supplement” “definitely a useful supplement” “can help make the logic clear” “often easier to understand” “more accurate” “easy to read” “provides more information”

DeltaDoc

- Cheap
 - Can be computed in about a second on average.
- Suitable for quick adoption
 - Can supplement or replace many existing commit messages.
- Structured
 - Suitable for search.
- Does not address “why”
- Search-based simplification?

Questions?

Relational Form

Type	Arity	Name
	unary	<i>is true</i> <i>is false</i>
logical	binary	or and equal to not equal to less-than greater-than less-than or equal to greater-than or equal to
programmatic	unary	is empty call / invoke return throw
	binary	assign to element of inserted in implies instance of
edit	unary	added changed removed

Relational Form Example

`getPriceForBuilding() > getOwner().getGold()`

has an insufficient amount of gold

`getPriceForBuilding() > getOwner().getGold()`

? > gold

Score Metric

- Conservatively assume only relations from **commit messages** are important.
- Reward precision.
- Used 16 human annotators to validate.
- Score of 0.5 indicates that the **DeltaDoc** contained all the information in the **commit message**.

Example Score = 0.5

Commit Message

```
no need to call clear()
```

DeltaDoc

```
When calling PdfContentByte reset()  
If stateList .isEmpty(),  
No longer call stateList .clear()
```

iText Rev 3837

Example Score > 0.5

Commit Message

Commented unused constant

DeltaDoc

removed field : EuropePanel : int TITLE_FONT_SIZE

Freecol rev 2054

Example Score < 0.5

Commit Message

Fixed bug: content selector for 'editor' field uses ',' instead of 'and' as delimiter.

DeltaDoc

```
When calling EntryEditor getExtra()  
  If ed.getFieldName().equals("editor")  
    call contentSelectors .add(FieldContentSelector)
```

JabRef Rev 3111
