Product Line Research in the CD Lab

Impact Analysis in SPLs: Context, Motivation, Goal

- Maintenance and evolution of product lines is increasingly complex
- We developed a product line engineering tool suite, the DOPLER tool suite

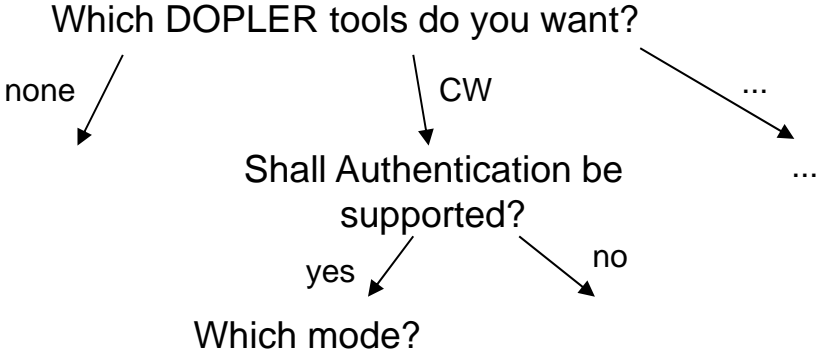

- We observed the evolution of this industrial product line while it was refactored for industrial use cases by Siemens VAI

→ Developers requested

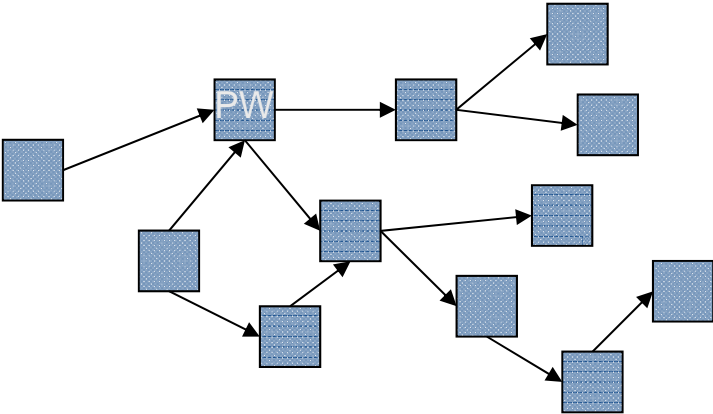

Support for Analyzing the Impact of Changes on Derived Products

DOPLER Product Line Models

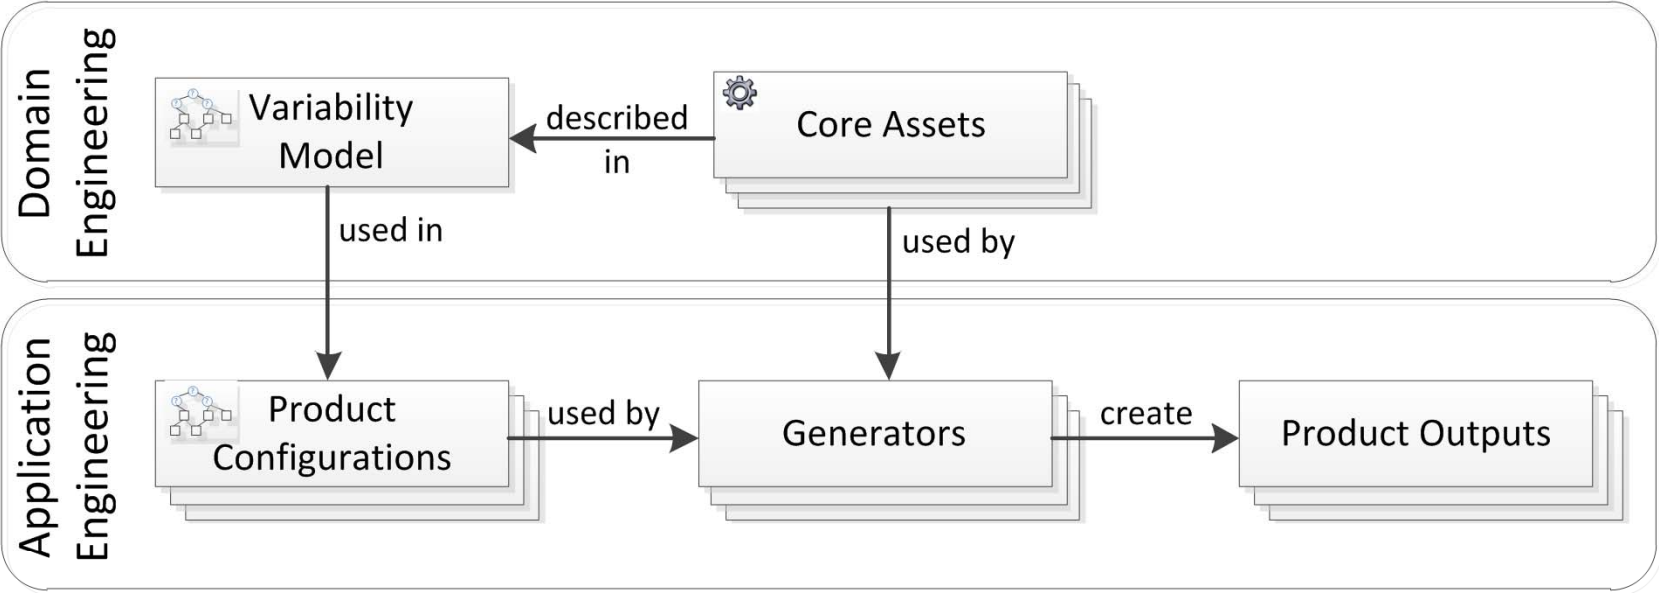

Decision model defines end-user perspective on variability

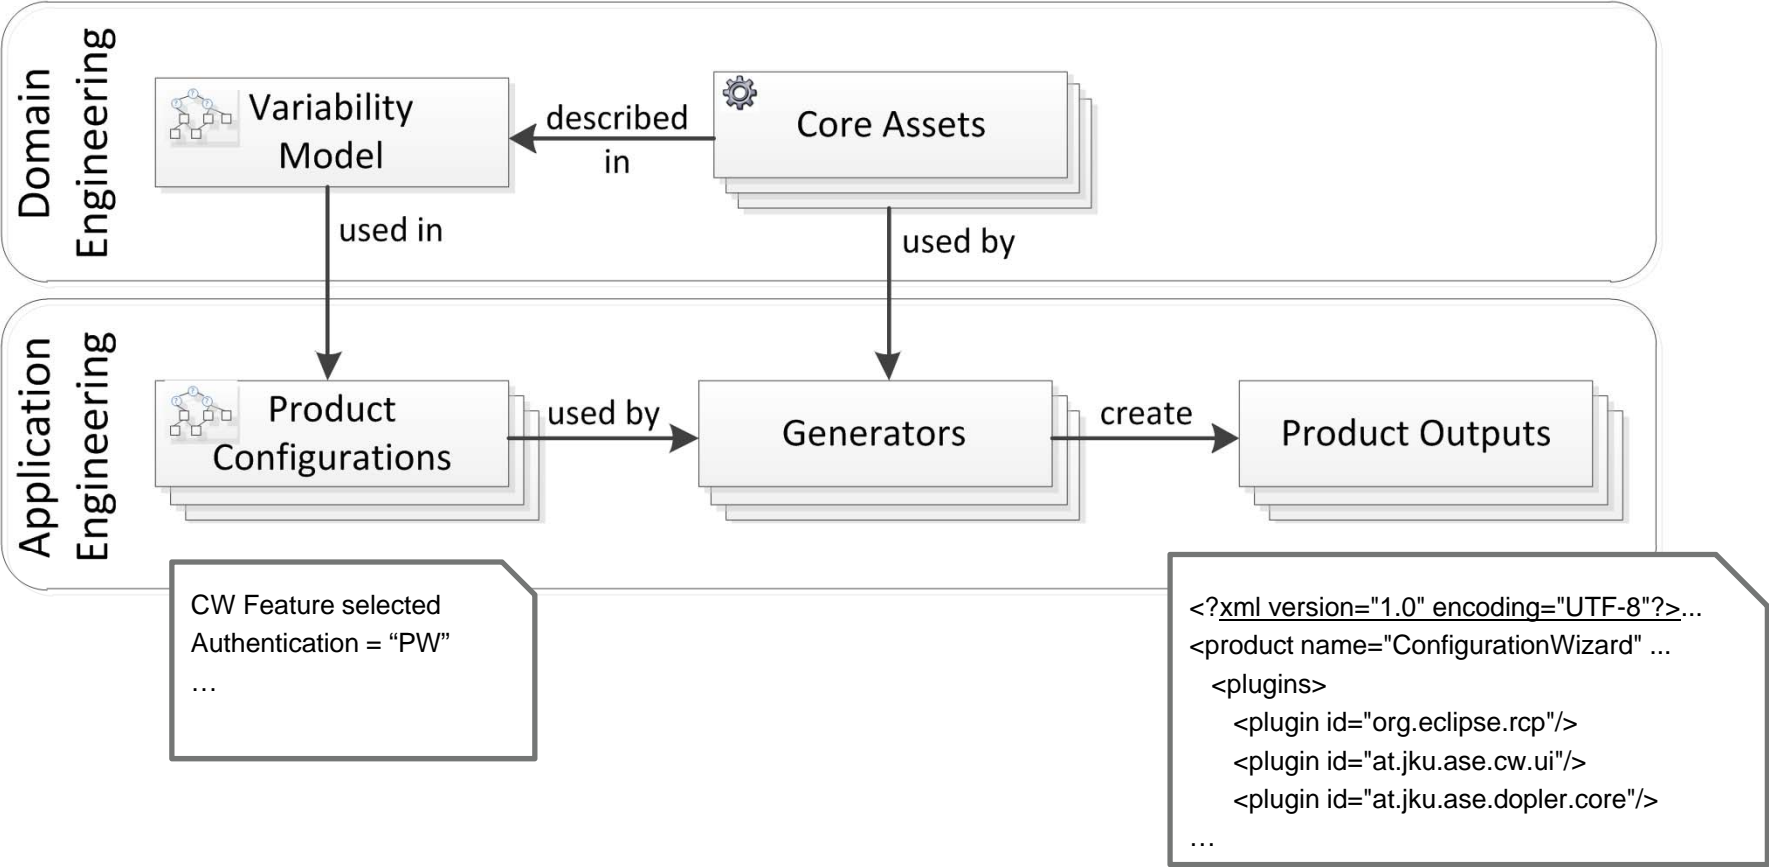

Asset model defines reusable artifacts with links to the implementation

Included assets used by generators to automate product derivation

Product Derivation

Product Derivation

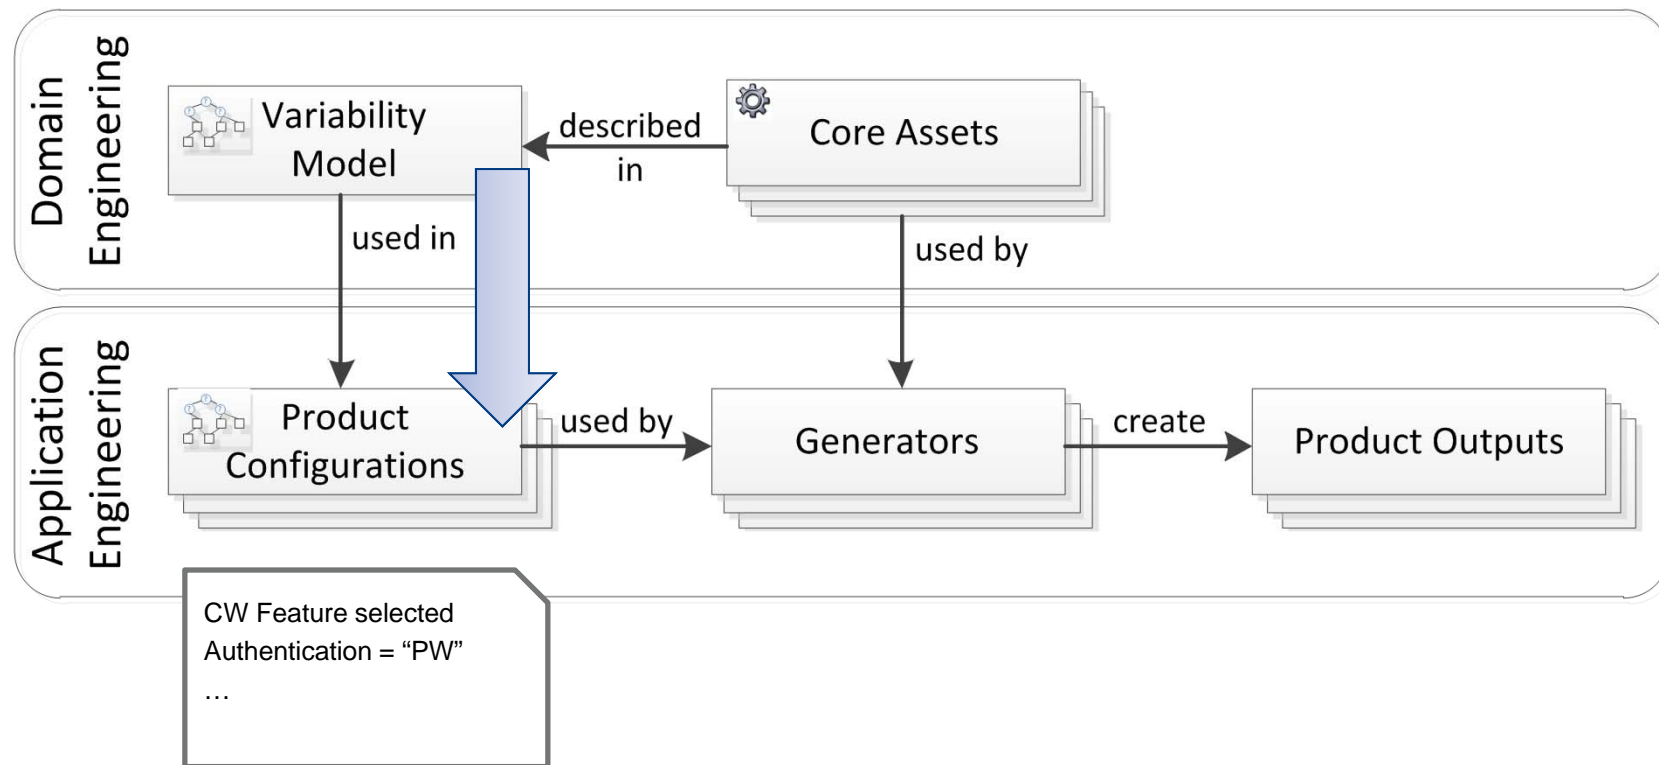

Problem

Changes may affect product configurations

- Features chosen for products are not available any more
- Additional features become available for products

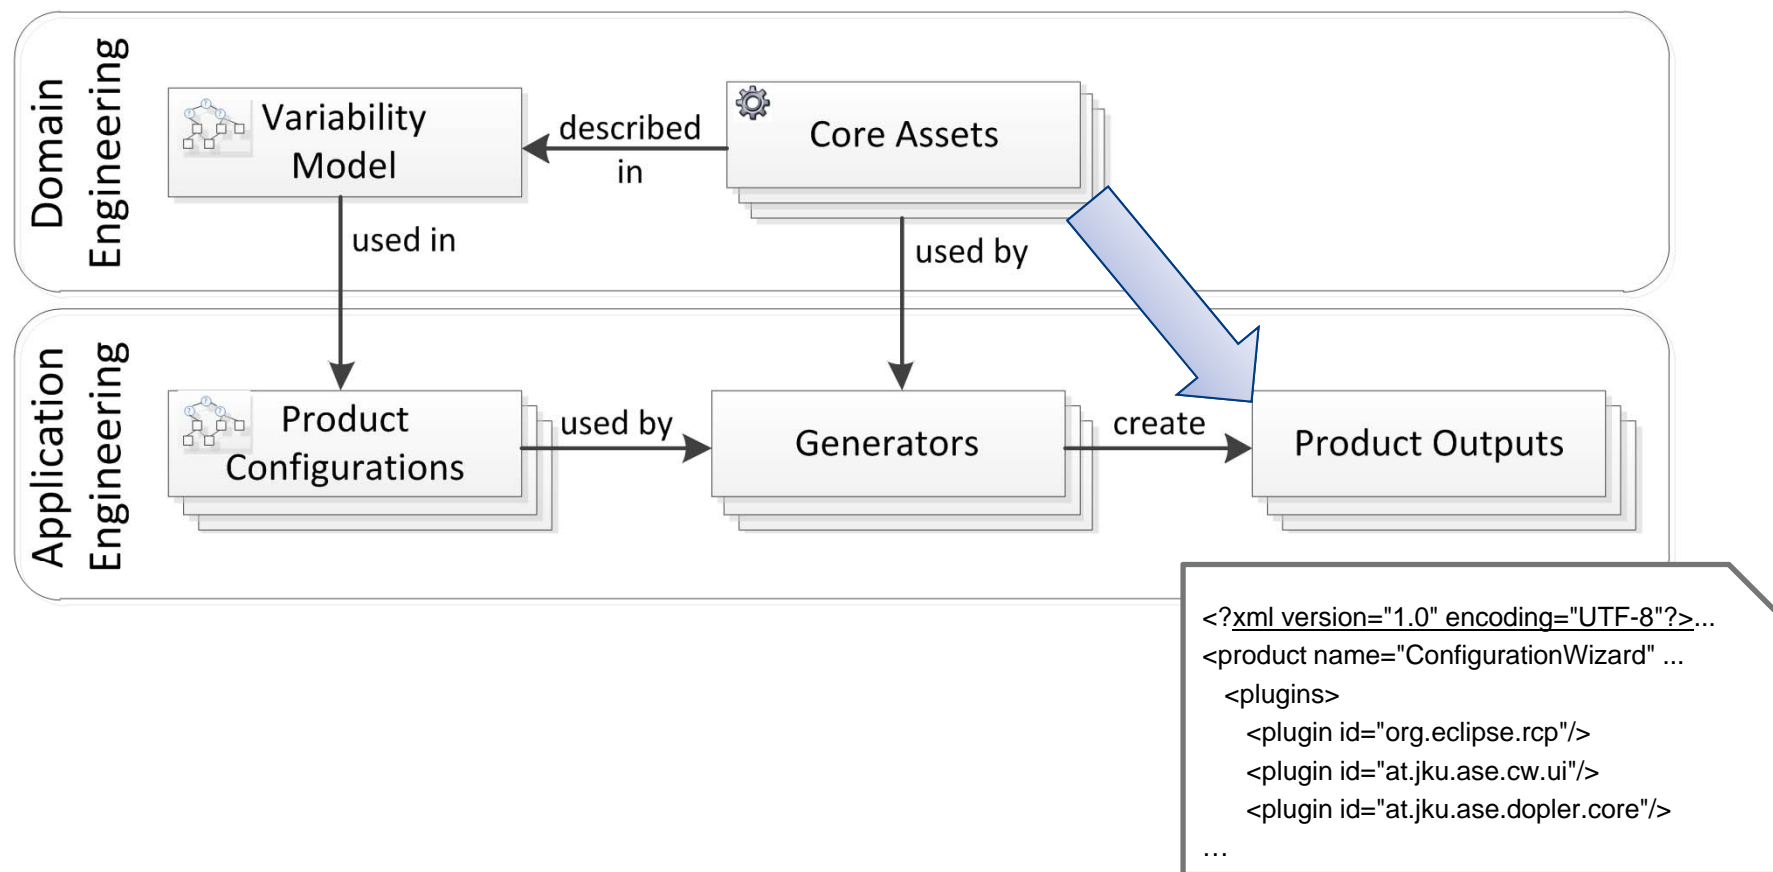

Problem

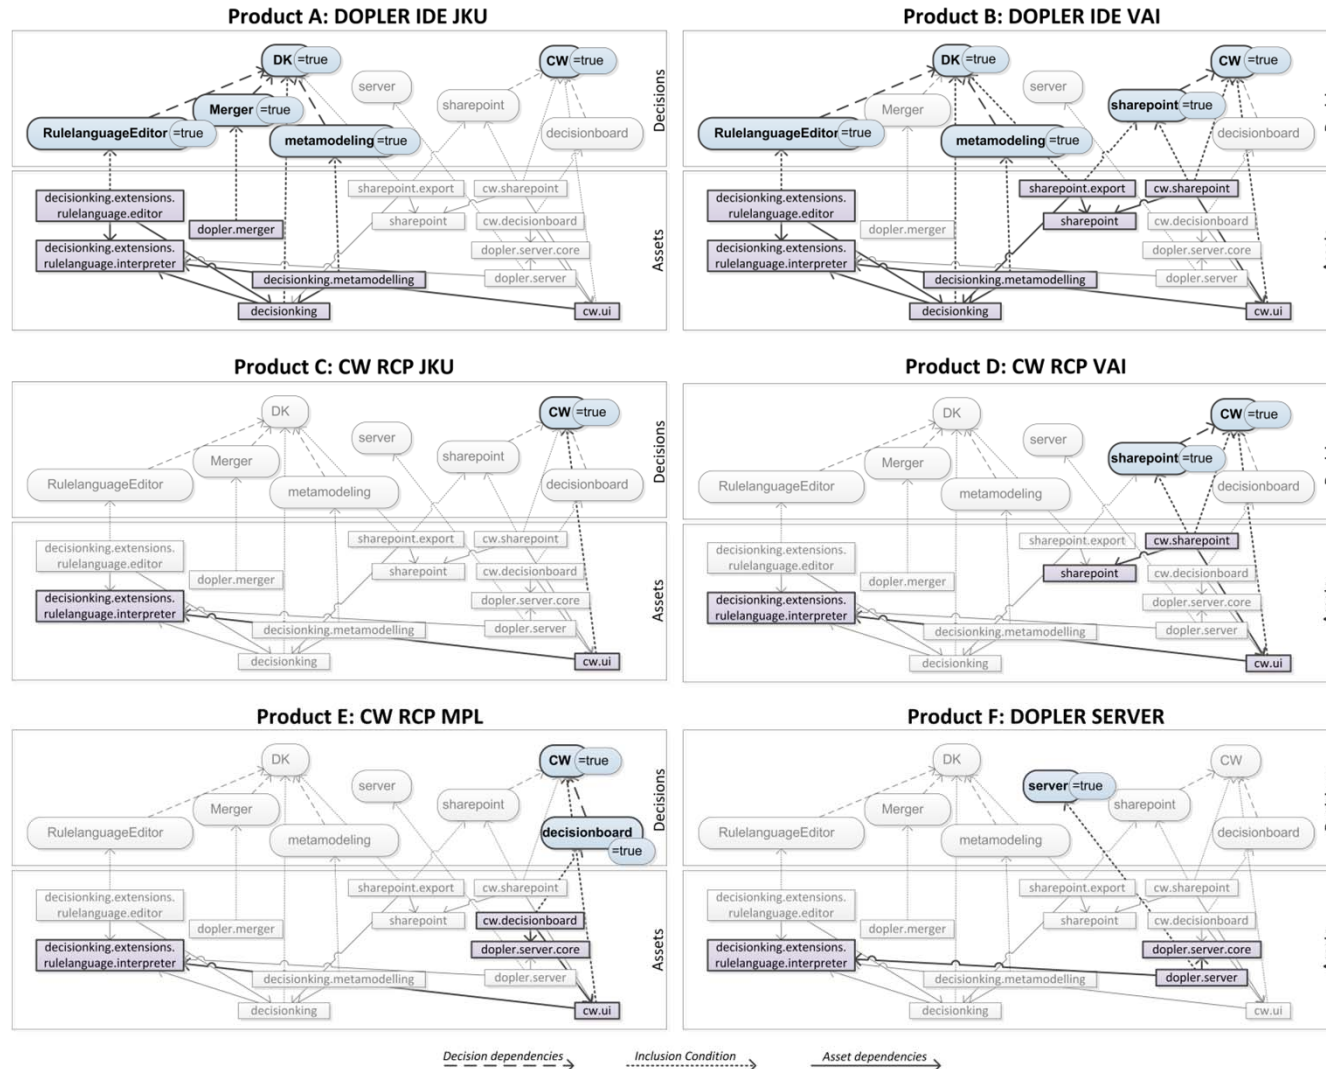

Changes may affect final product outputs

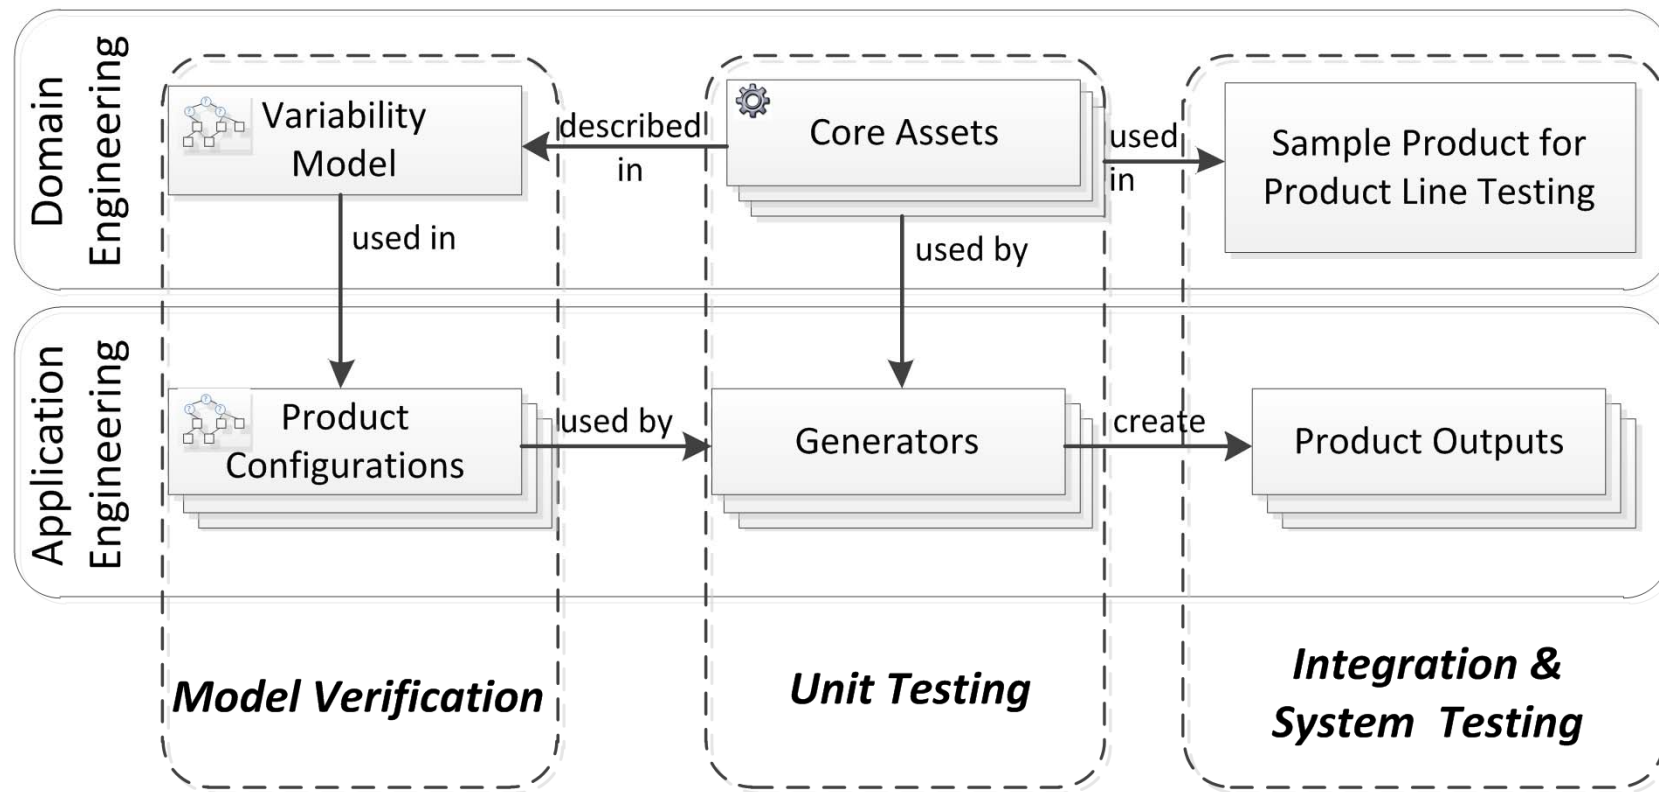

- Components may need to be updated for products
- Components may be added / removed in products

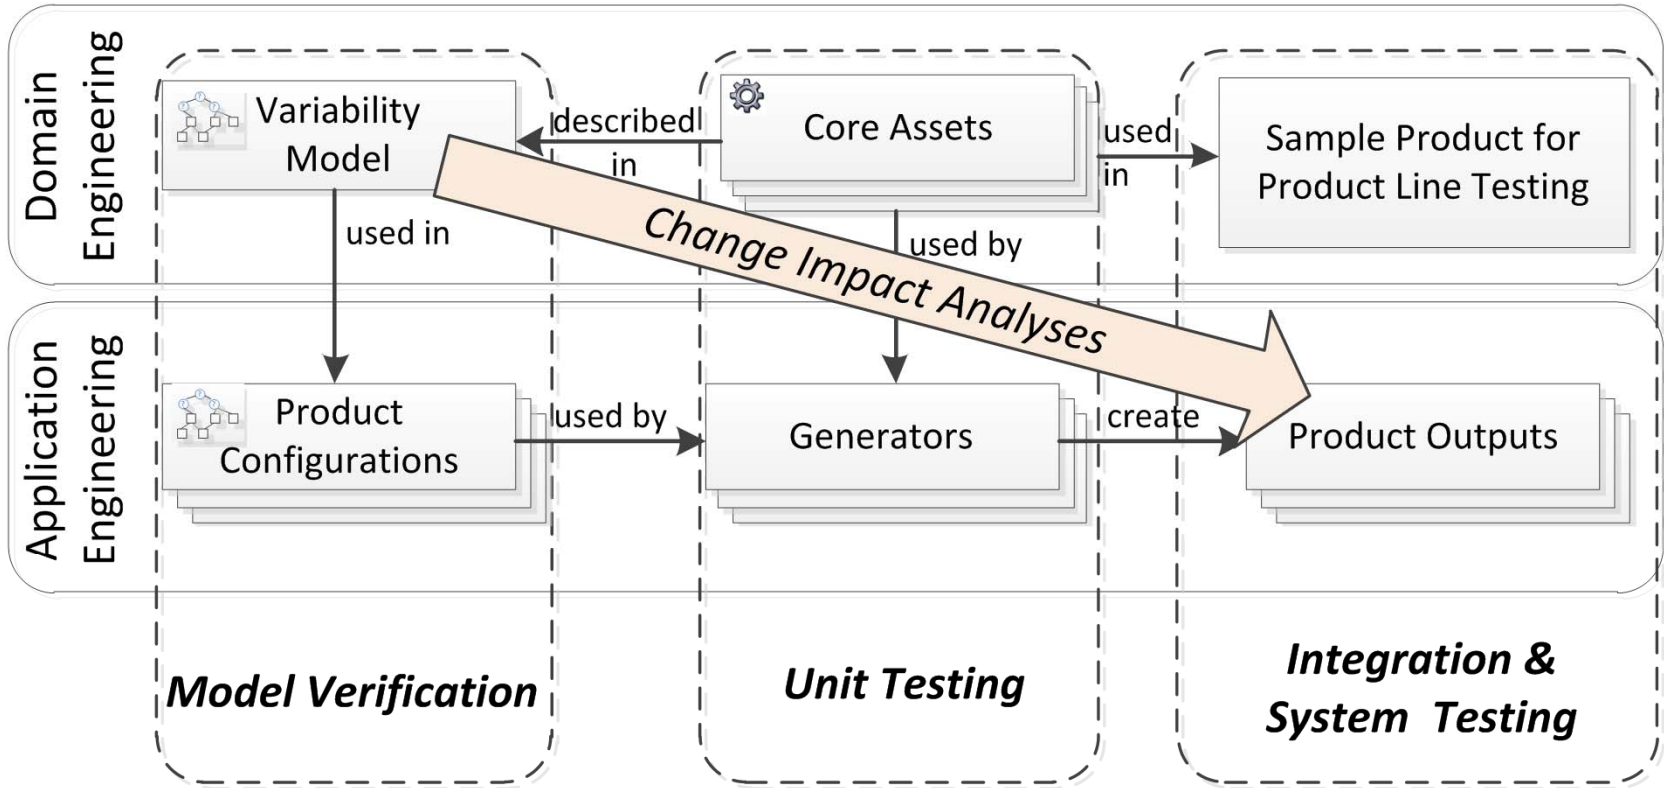

Variability Models are used to derive many products...

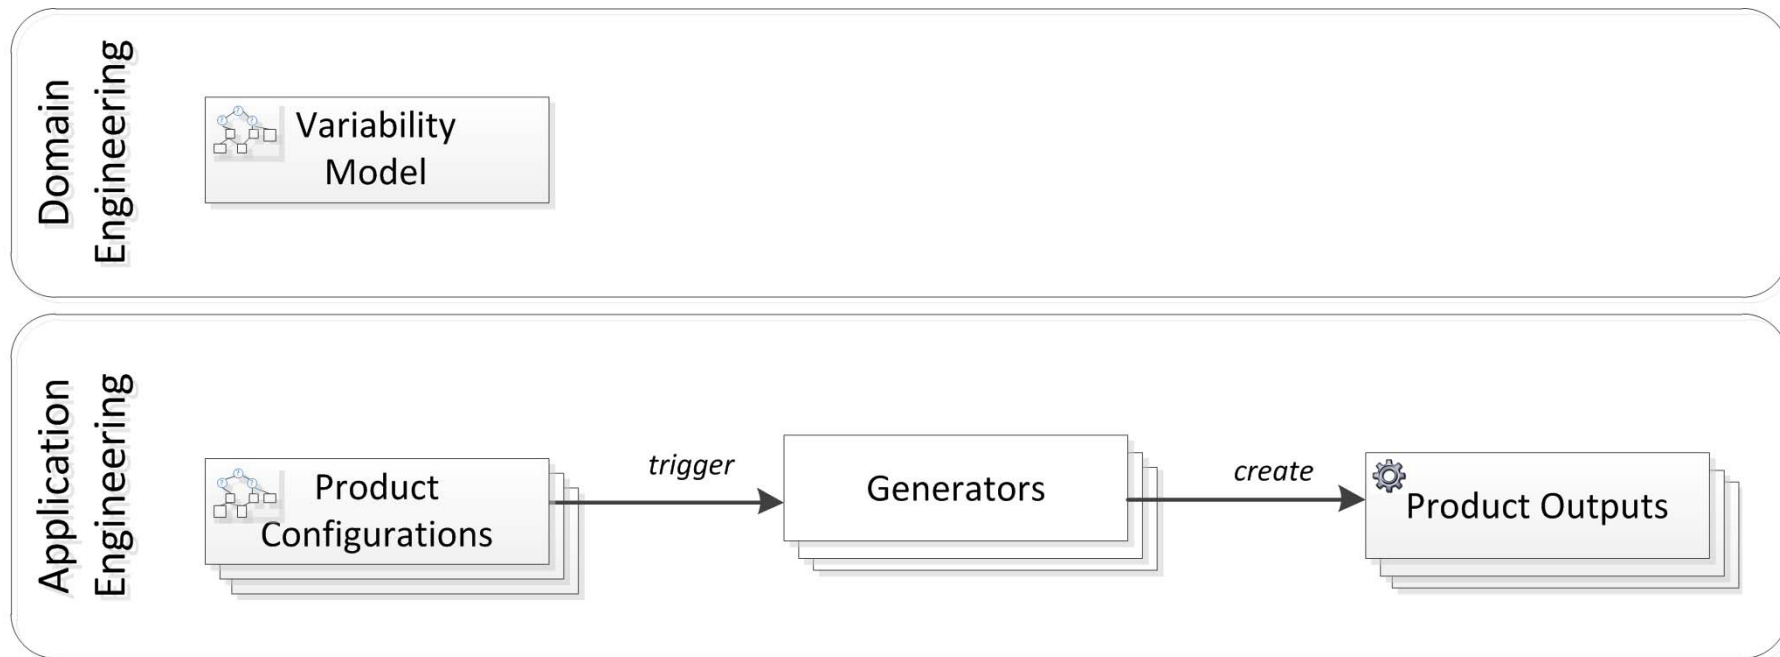

Impact Analysis: Common Approaches

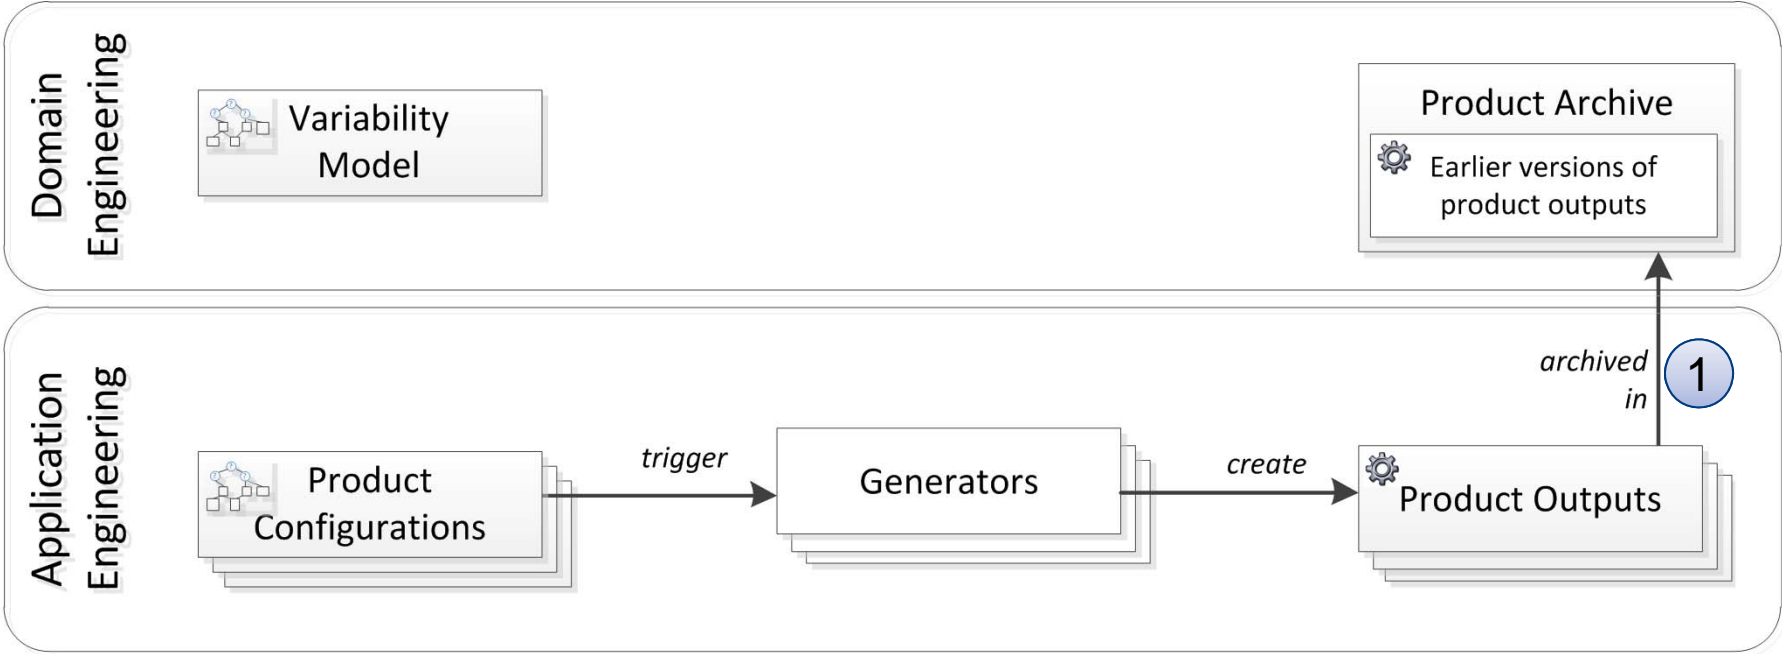

Required Change Impact Analysis

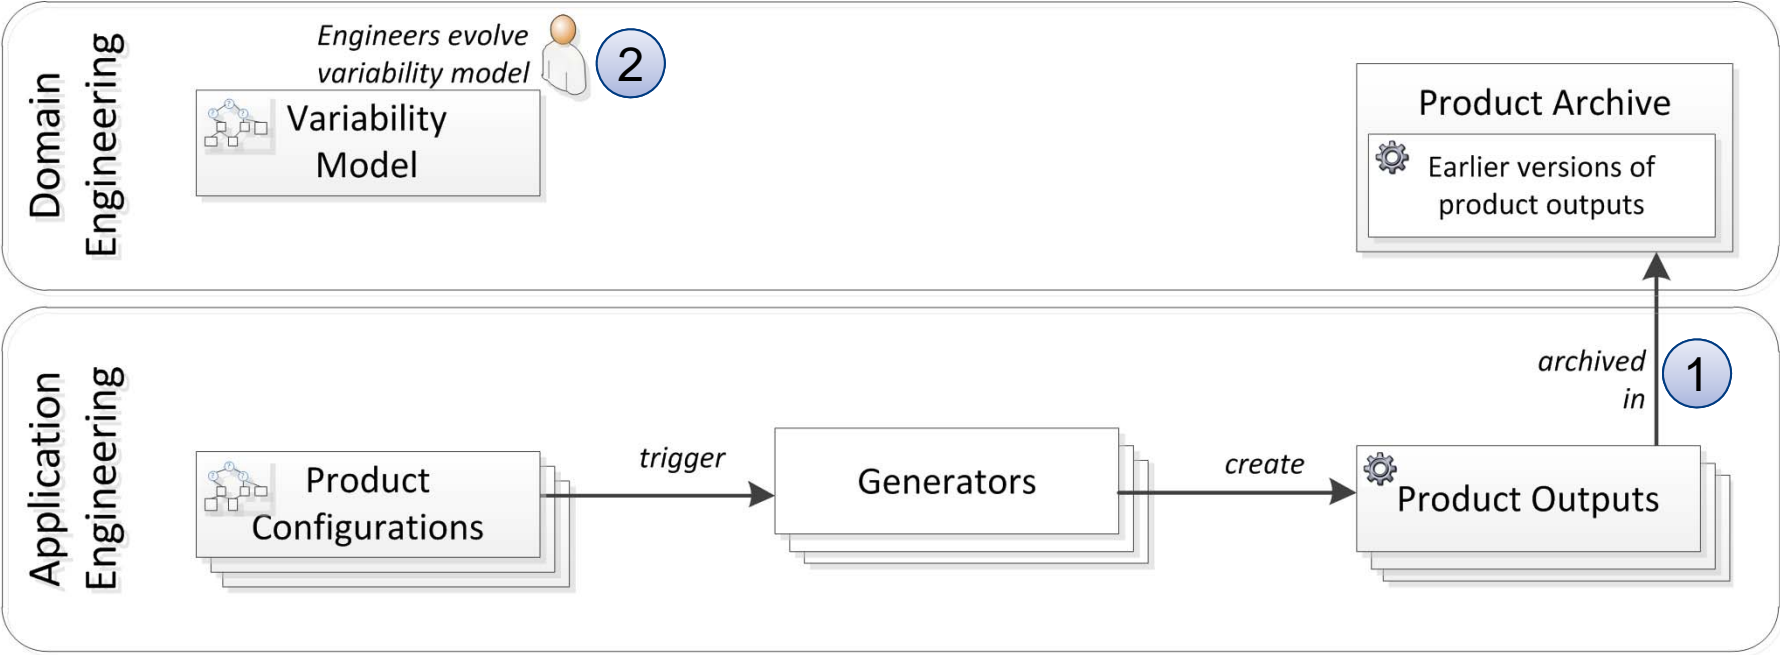

Our Approach

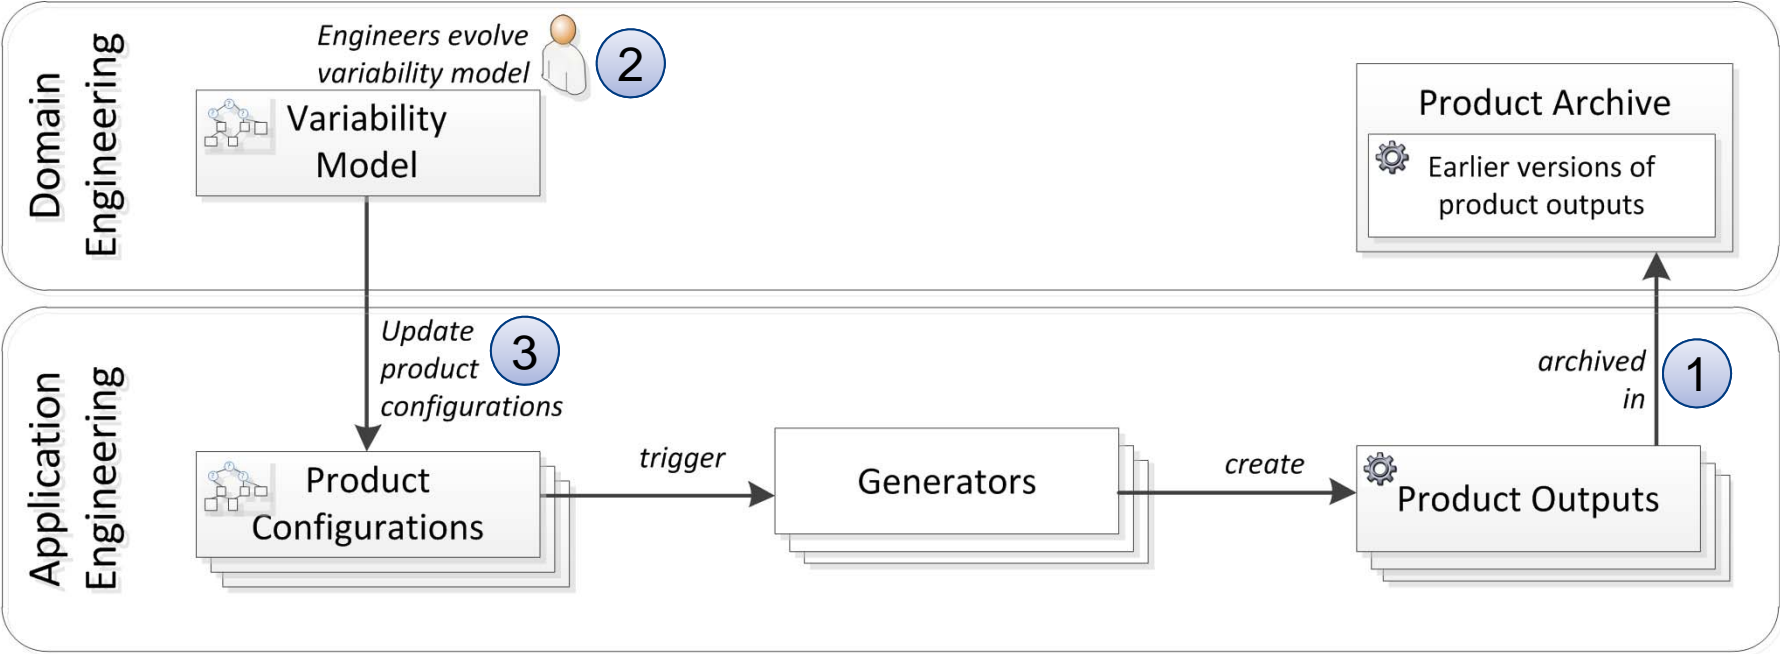

Our Approach

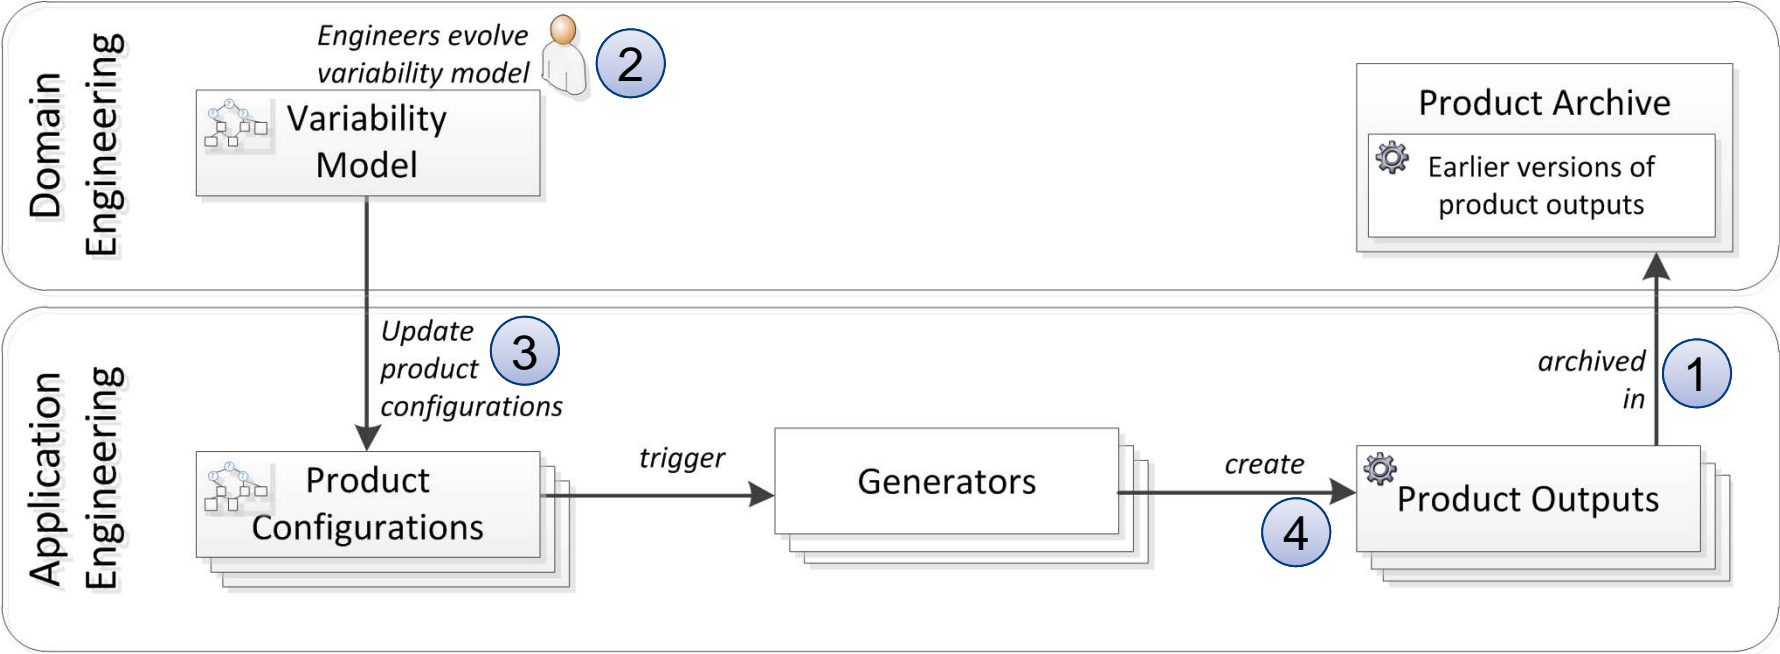

Our Approach

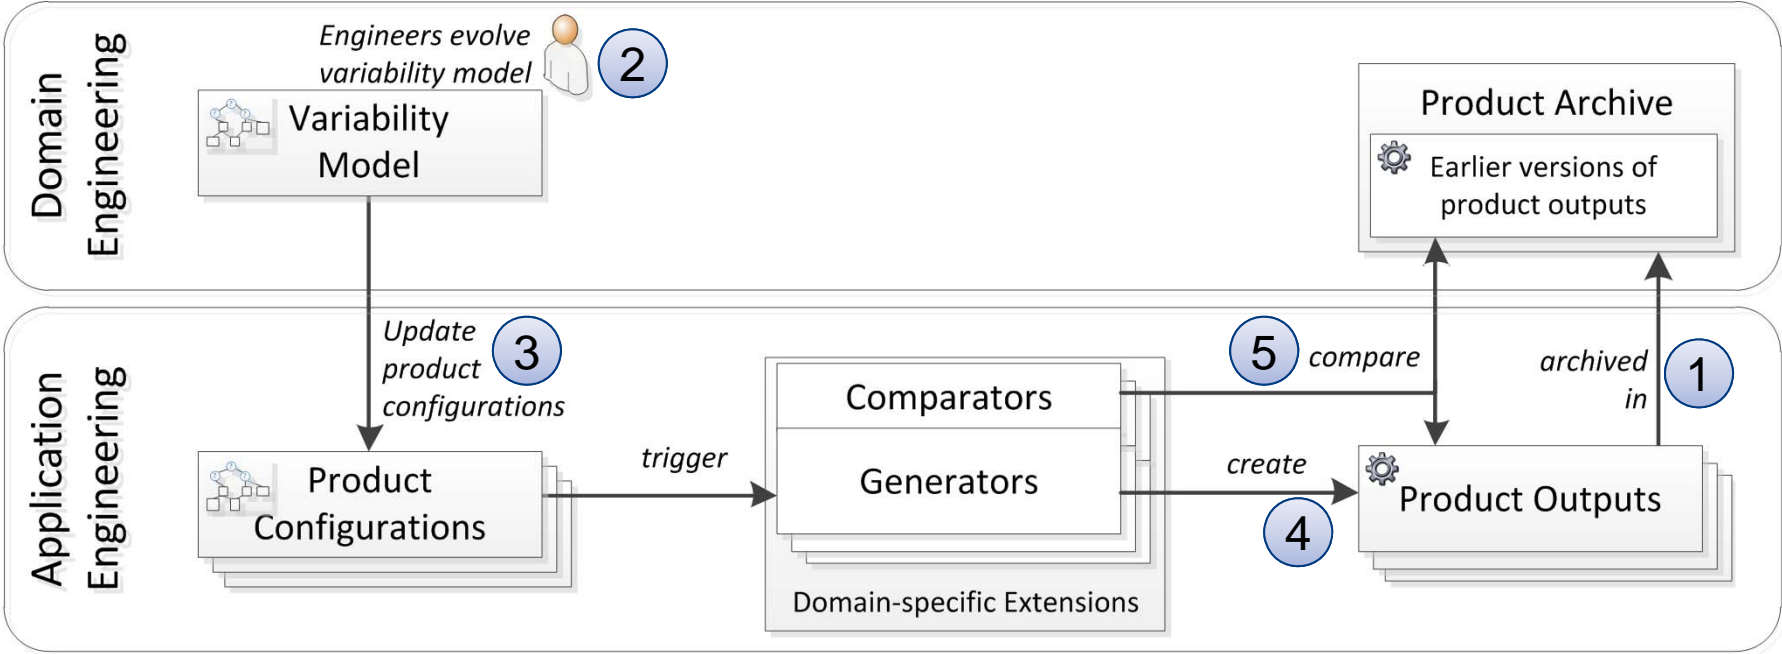

Our Approach

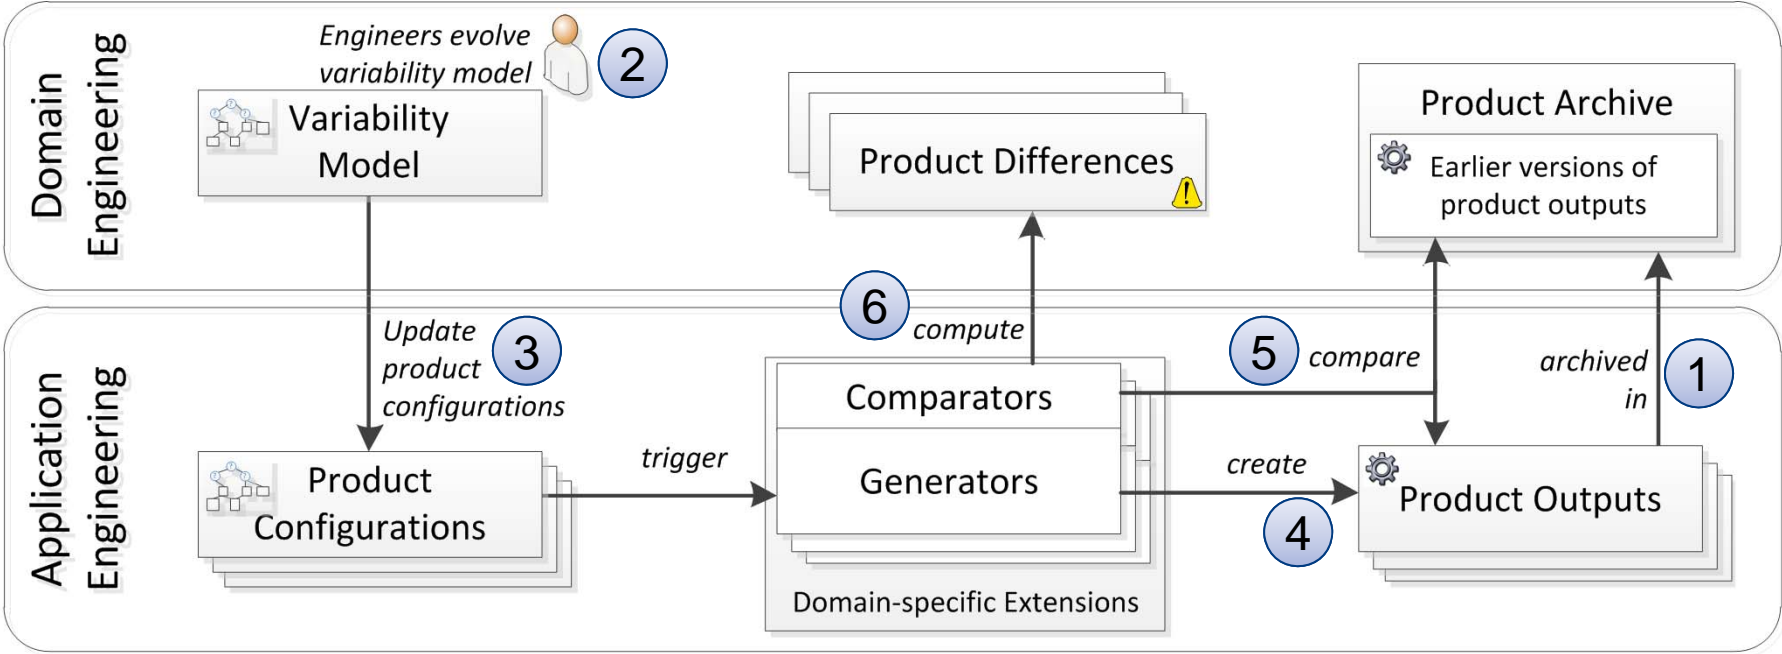

Our Approach

Our Approach

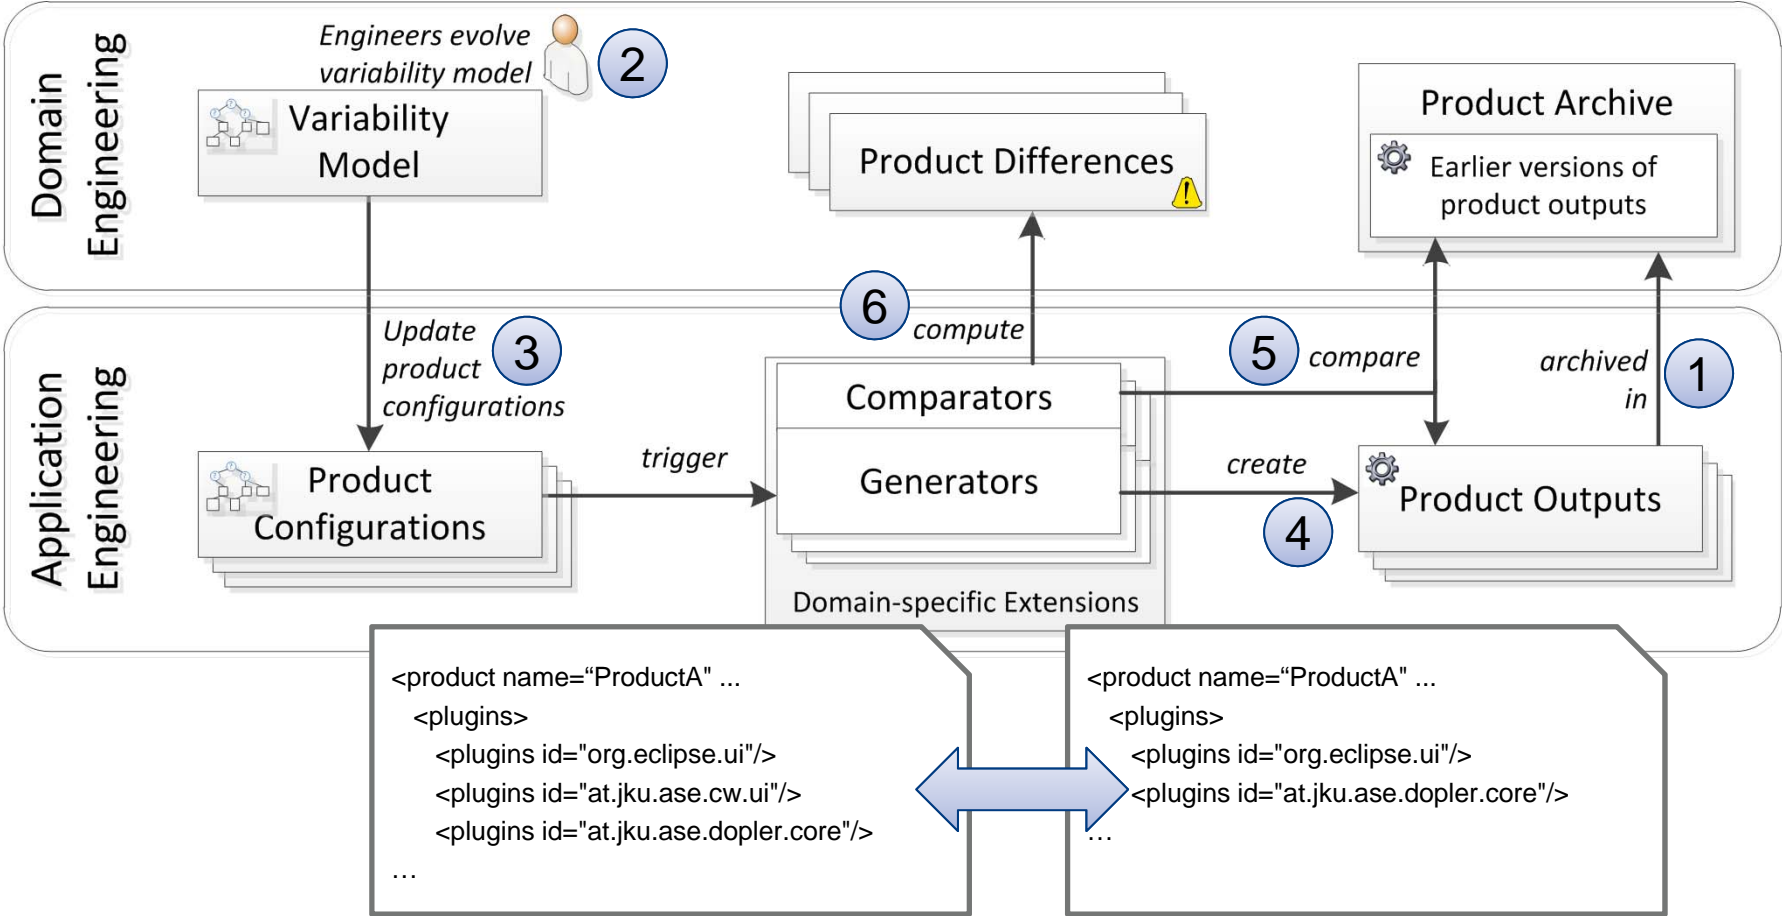

Our Approach

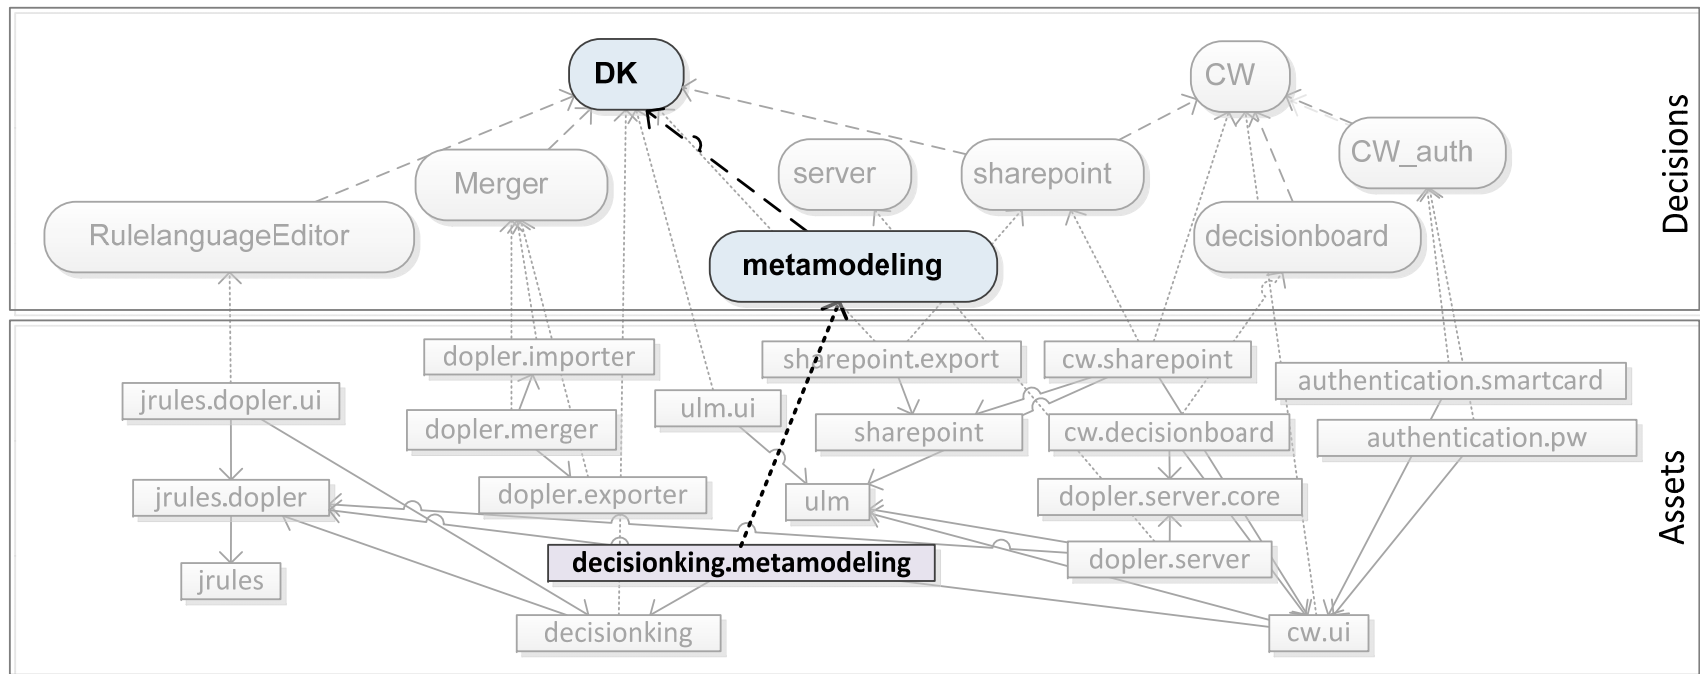

Our Approach

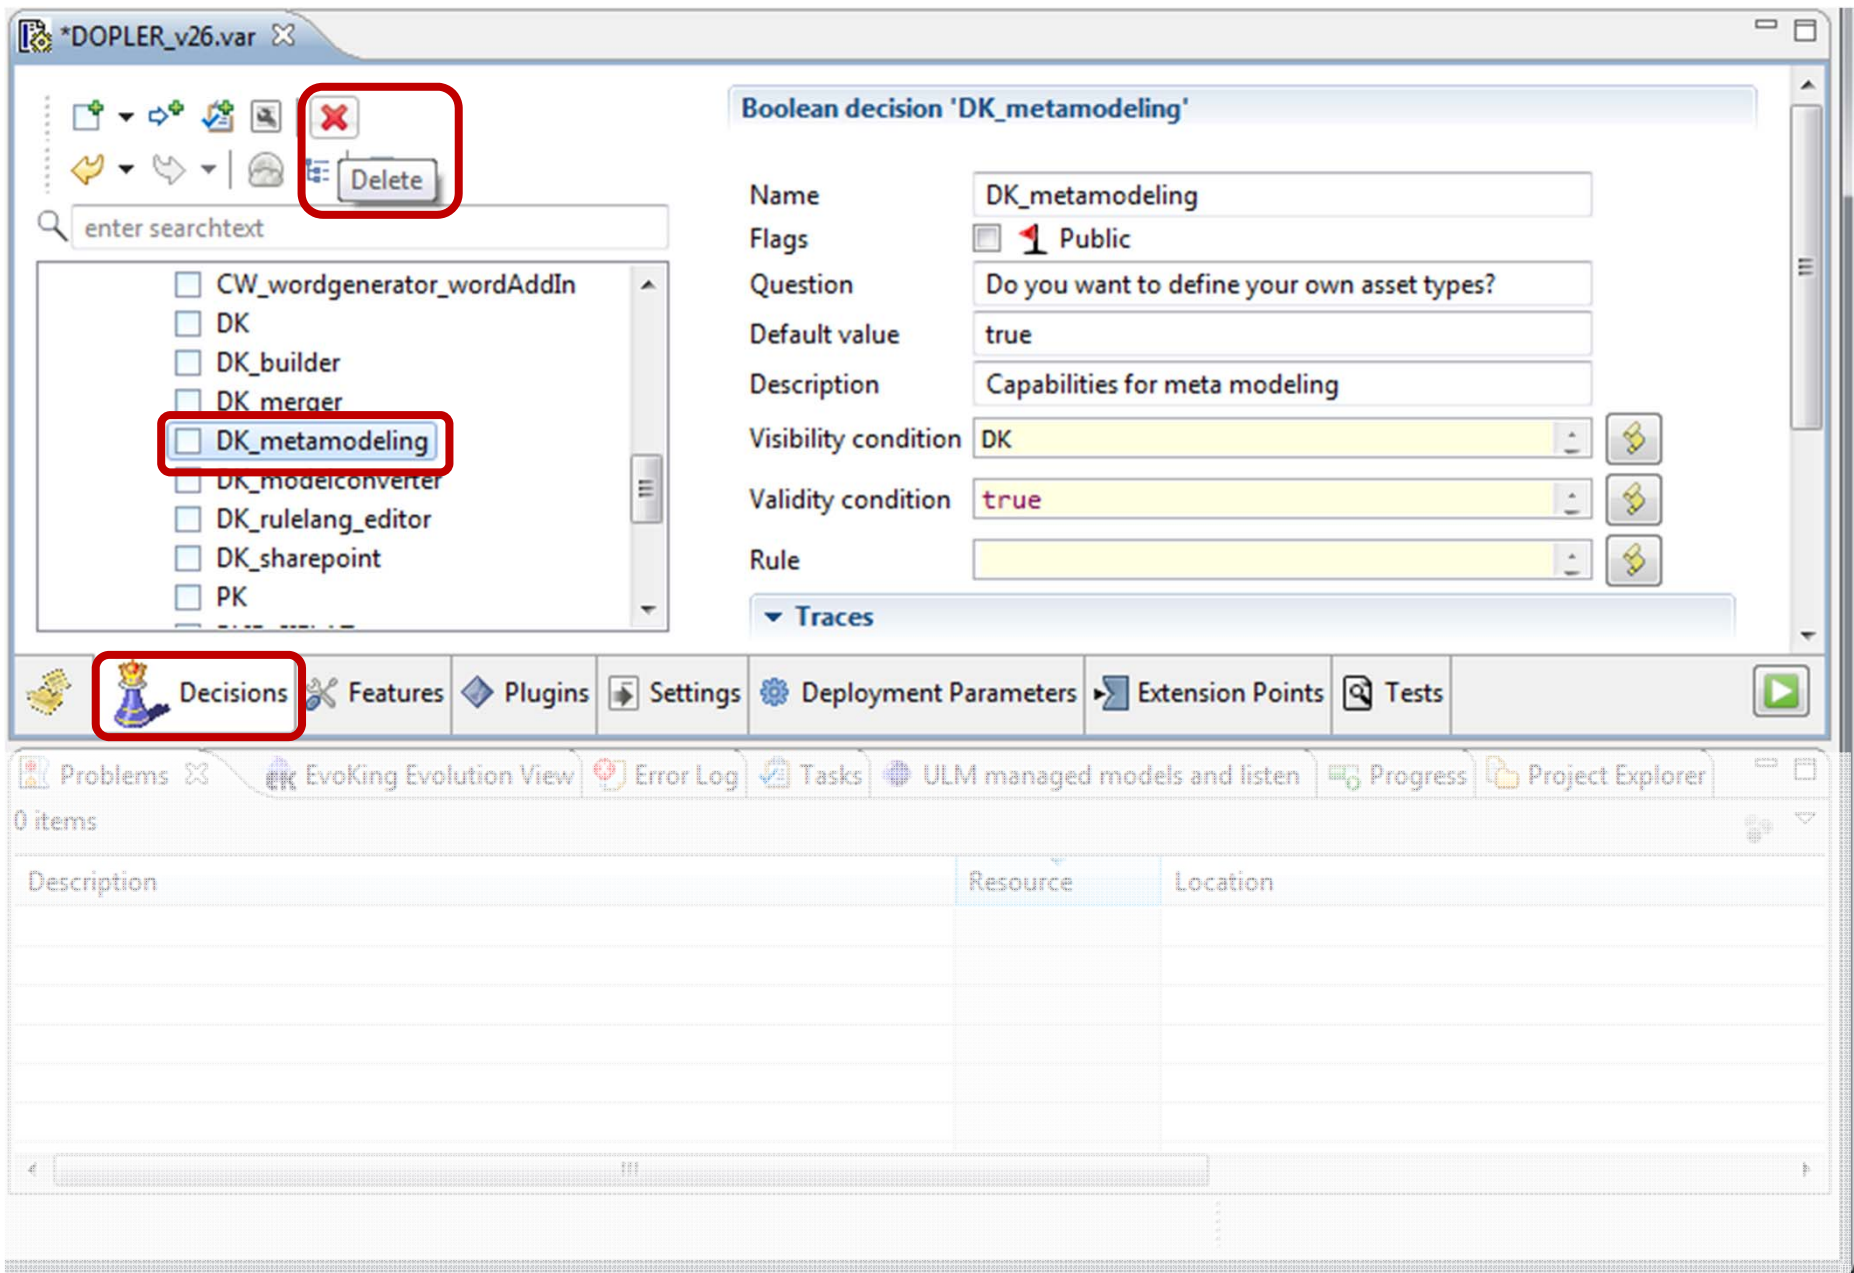

→ Required plugin at.jku.ase.cw.ui would be removed in product

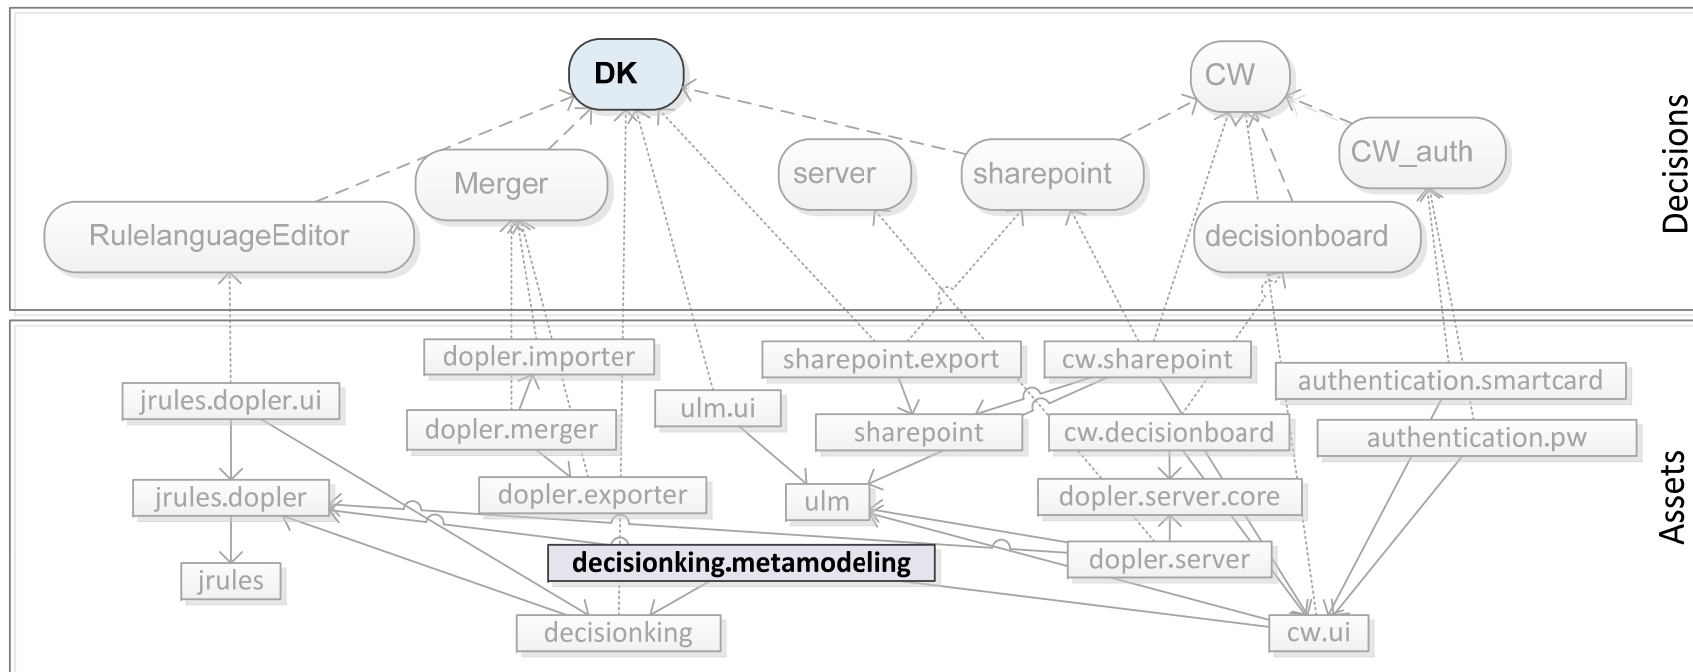

Example

Reduce Variability: Remove the choice on meta modeling.

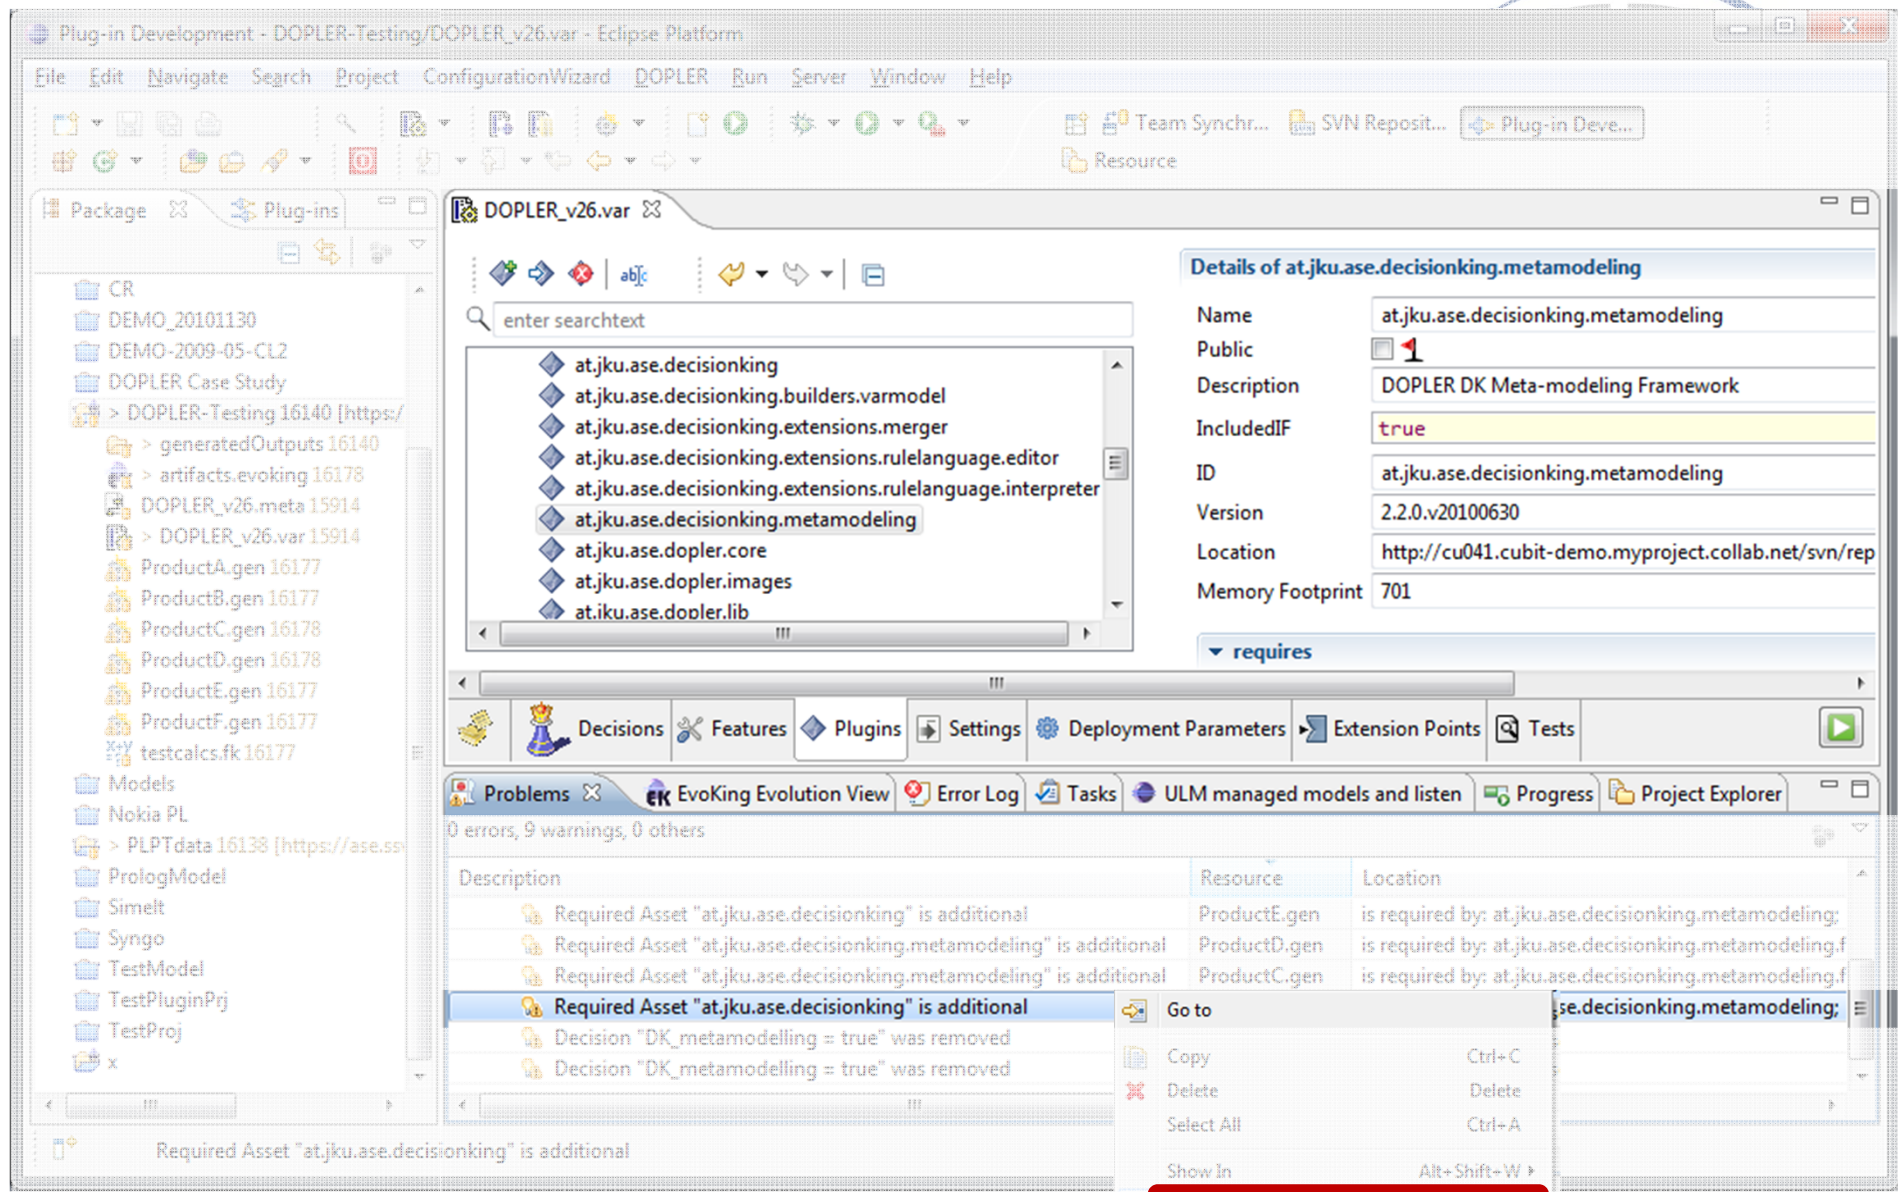

Example

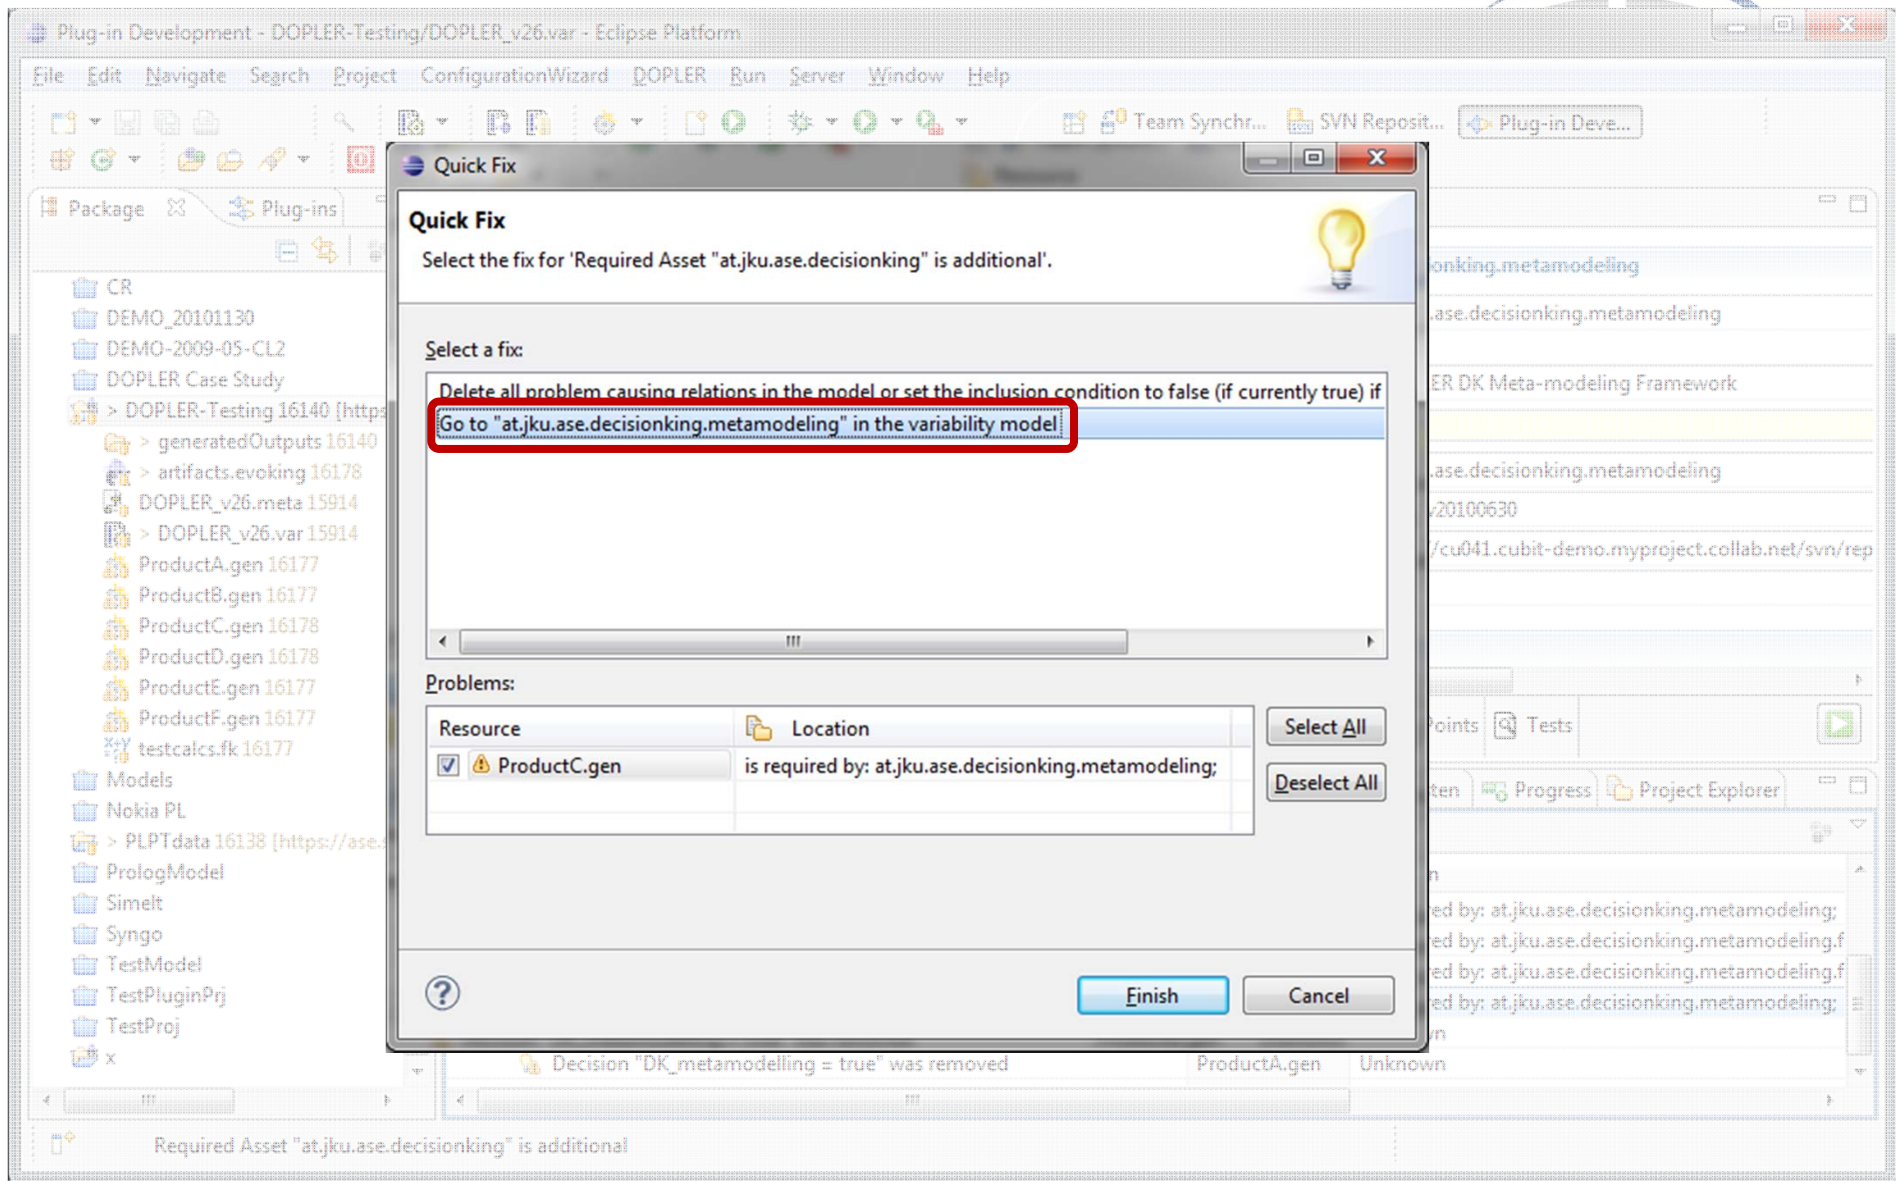

Always include “decisionking.metamodeling”?
Or make it dependent on another decision?

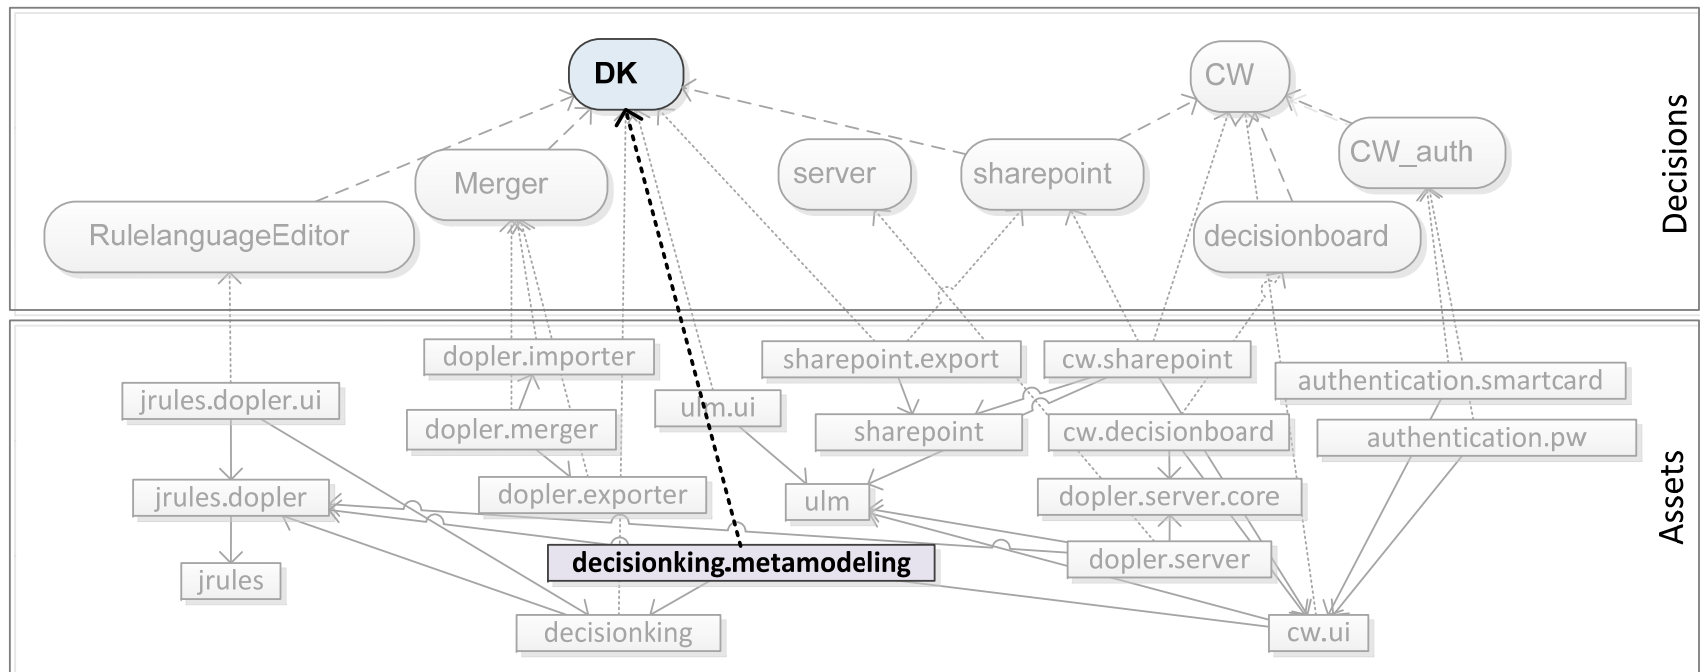

The screenshot displays the 'Details of at.jku.ase.decisionking.metamodeling' window. The 'IncludedIF' property is highlighted in red and set to 'true'. Below this, the 'requires' section is visible. The bottom part of the image shows the 'Problems' view with a table of errors/warnings. One error is highlighted in red: 'Required Asset "at.jku.ase.decisionking.metamodeling" is additional'. A blue callout box at the bottom states: 'One final product would include two additional plugins.'

Description	Resource	Location
Required Asset "at.jku.ase.decisionking" is additional	ProductE.gen	is required by: at.jku.ase.decisionking.metamodeling;
Required Asset "at.jku.ase.decisionking.metamodeling" is additional	ProductD.gen	is required by: at.jku.ase.decisionking.metamodeling.f
Required Asset "at.jku.ase.decisionking.metamodeling" is additional	ProductC.gen	is required by: at.jku.ase.decisionking.metamodeling.f
Required Asset "at.jku.ase.decisionking" is additional	ProductC.gen	is required by: at.jku.ase.decisionking.metamodeling;
Decision "DK_metamodeling = true" was removed	ProductB.gen	Unknown
Decision "DK_me		

Example

Include “decisionking.metamodeling” depending on DK!

The screenshot shows the DOPLER IDE interface. On the left, a search bar contains 'enter searchtext' and a tree view lists several packages, with 'at.jku.ase.decisionking.metamodeling' selected. On the right, the 'Details of at.jku.ase.decisionking.metamodeling' panel shows the following information:

- Name: at.jku.ase.decisionking.metamodeling
- Public: 1
- Description: DOPLER DK Meta-modeling Framework
- IncludedIF: DK
- ID: at.jku.ase.decisionking.metamodeling
- Version: 2.2.0.v20100630
- Location: http://cu041.cubit-demo.myproject.collab.net/svn/rep
- Memory Footprint: 701

Below the details panel, a 'requires' section is visible. At the bottom, the 'Problems' view shows 0 errors, 2 warnings, and 0 others. The warnings are:

Description	Resource	Location
Warnings (2 items)		
Decision "DK_metamodelling = true" was removed	ProductB.gen	Unknown
Decision "DK_metamodelling = true" was removed	ProductA.gen	Unknown

**Product configurations for two products change.
The final product outputs (required assets) do not change!**

Conclusions / Lessons Learned

- Approach currently also used to analyze the impact of product line evolution for a system supporting the management of tombs (RIP)
- Impact analysis in product lines can perform well for real world scenarios
- Existing product generators can be reused
- Simple artifact representations reduce execution time
- Product updates need to be automated

Future Work / New Christian Doppler Lab

- **Monitoring and Evolution of Very-Large-Scale SW Systems**
- Feb 2013-Jan 2020; Head: Paul Grünbacher; <http://mevss.jku.at>
- **Goal:** Develop and improve methods for monitoring and diagnosing VLSS to support their systematic evolution

- Requirements-based monitoring and diagnosis
 - Ensuring compliance with requirements after evolving a large-scale component in a VLSS

- Multi-modeling in software ecosystems
 - Determining the impact of a platform change on globally distributed customer systems in a multi-level ecosystem

- Application performance management
 - Diagnosing performance bottlenecks in distributed and heterogeneous web applications after software changes
