

THE UNIVERSITY *of York*

The Workshop

Professor John A Clark

MA (Maths), MSc (Applied Statistics), PhD (Computer Science)

Royal Society Wolfson Research Merit Award Holder

- Originally intended to support proposal development by ECRs on the EPSRC DAASE Programme Grant.
 - Decided to open it up to the CS community via CPHC announcement.
 - Around 100 people registered an interest in two weeks.
 - We can only do 48 this time. That's you!
 - Here we go.

- Goal is for you to work your way through an *outline* grant proposal and discuss issues with others along the way.
 - Produce outline aims/goals and aim to “sell” them to your fellow attendees.
 - See if they are excited or otherwise care!
 - Produce an outline Track Record
 - Produce an outline Programme of Work etc.

- Why this problem?
- Why should anyone care?
- Why me?
- Why this proposal?

Case For Support

← The technical meat of the proposal. Generally the very “hard” bit. Track record (2 Pages). Description of work (6 pages max).

Justification for Resources

← Why you need what you asked for. Shouldn't be that hard. 2 pages max.

Pathways to Impact

← What you are going to do to make sure the wider world cares about your results. 2 pages max. Hard.

Schedule (e.g. Gantt chart)

← Fairly straightforward.

Staff CVs

← Can vary with call but usually 2-page max for each “named” staff member.

JES-form

← The administrative interface to the EPSRC: official finance figures, objectives, public summary, suggested referees etc.

Other supporting docs

← Could be anything, e.g. letters of support.

We will cover many aspects of the above, but mainly the top three.

- Mixture of lectures and group work, and plenary presentations.
- You'll be discussing your efforts with other attendees.
- This is **FEEDBACK** and is to be highly valued.
- Let's get going!
